BELL, *n*. [*Sax. bell, bella, belle*, so named from its sound; Sax. *bellan*, to *haul* or *bellow*; W. *ballaw*; coinciding with *bellus* and *pello*. See PLAT.] 1. A vessel or hollow body used for making sounds. Its constituent parts are a barrel or hollow body, enlarged or expanded at one end, an ear or cushion by which it is hung to a beam, and a clapper on the inside. It is formed of a composition of metals. Bells are of high antiquity. The blue tunic of the Jewish high-priest was adorned with golden bells; and the kings of Persia are said to have the hem of their robe adorned with them in like manner. Among the Greeks, those who went the nightly rounds in camps or garrisons, used to ring a bell, at each sentinel-box, to see that the soldier on duty was awake. Bells were also put on the necks of criminals, to warn persons to move out of the way of so ill an omen, as the sight of a criminal or his executioner; also on the necks of beasts and birds and in houses. In churches and other public buildings, bells are now used to notify the time of meeting of any congregation or other assembly. Bells are ranked by musicians among the musical instruments of percussion. The music of bells is altogether melody; but the pleasure arising from it consists in the variety of interchanges, and the various succession and general predominance of the consonances in the sounds produced. Bells of a very large size are used in Russia and China. The largest bell in England, is the Great Tom of Christ Church, Oxford. It weighs 17,000 lbs. The great bell of Moscow, cast in 1633, is computed to weigh 443,772 lbs. It was never removed from the place where it was

Yet in this case there is always some reference in the mind to known measure. **BILE**, *n.* [*L. bilis*; *Fr. bile*.] A yellow bitter liquor, separated from the blood in the liver, collected in the *pori biliarii* and gall bladder. The most obvious use of the bile in the animal economy, is to separate the chyle from the chyme. It appears also to aid in exciting the peristaltic action of the intestines. The natural colour of the faeces seems to be owing to the presence of bile. According to Thénard, an able chemist, 1100 parts of human bile, consist of 1000 parts of water, 2 to 10 of yellow insoluble matter, 42 albumen, 41 resin, 5.6 soda, and 45 phosphates of soda of lime, sulphate of soda, muriate of soda, and oxide of iron. According to Liebig, the elements of the bile serve for respiration, and the production of animal heat. It returns entirely into the circulation and disappears completely; so that the notion of its being expelled from the body in the faeces is erroneous.

*Ye were as sheep going astray, but are now returned to the shepherd and bishop of your souls;* 1 Pet. ii.

2. In the primitive church, a spiritual overseer; an elder or presbyter; one, who had the pastoral care of a church.

The same persons are in this chapter called elders or presbyters, and overseers or bishops. *Scott, Comm. Acts xx.*

Till the churches were multiplied, the bishops and presbyters were the same.

*Ib.* Phil. i. i; 1 Tim. iii. i; Tit. i. 7. Both the Greek and Latin fathers do, with one consent, declare, that bishops were called presbyters, and presbyters bishops, in apostolic times, the name being then common.

*Whitby.*  
3. In the Greek, Latin, and some Protestant churches, a prelate, or person consecrated for the spiritual government and direction of a diocese. In Great Britain, bishops are nominated by the king, who, upon request of the dean and chapter, for leave to elect a bishop, sends a *compte d'élire*, or licence to elect, with a letter missive, nominating the person whom he would have chosen. The election, by the chapter, must be made within twelve days, or the king has a right to appoint whom he pleases. Bishops are consecrated by an archbishop, with two assistant bishops. A bishop must be thirty years of age; and all bishops, except the bishop of Man, are peers of the realm. A bishop, as well as an archbishop, has his consistory court, to hear ecclesiastical causes, and is to visit the clergy, &c. He consecrates churches, ordains, admits, and institutes priests; confirms, suspends, excommunicates, grants licences for marriage; makes probates of wills, &c. He has his archdeacon, dean, and chapter, chancellor, and vicar general, to assist him. And may grant leases for three lives, or twenty-one years of lands usually let, reserving the accustomed yearly rents. By the canons of the Protestant Episcopal church in the United States, no diocese or state shall proceed to the election of a bishop, unless there are at least six officiating presbyters residing therein who shall be qualified, according to the canons, to vote for a bishop; a majority of whom at least must concur in the election. But the conventions of two or

more dioceses, or states, having together nine or more such presbyters, may join in the election of a bishop. A convention is composed of the clergy, and a lay delegation, consisting of one or more members from each parish. In every state, the bishop is to be chosen according to such rules as the convention of that state shall ordain. The mode of election, in most or all of the states, is by a concurrent vote of the clergy and laity, in convention, each body voting separately. Before a bishop can be consecrated, he must receive a testimonial of approbation from the general convention of the church; or if that is not in session, from a majority of the standing committee in the several dioceses. The mode of consecrating bishops and ordaining priests and deacons, differs not essentially from the practice in England.

It is somewhat harder than lead, and scarcely, if at all, malleable, being so brittle as to break easily under the hammer, and it is reducible to powder. Its internal face or fracture exhibits large shining plates, variously disposed. It melts at 476° Fahr. and may be fused in the flame of a candle. It is often found in a native state, crystallized in rhombs or octahedrons, or in the form of dendrites, or thin laminae investing the ores of other metals, particularly cobalt. Bismuth is used in the composition of pewter, in the fabrication of printers' types, and in various other metallic mixtures. Eight parts of bis-

muth, 6 of lead, and 3 of tin, constitute the fusible metal sometimes called Newton's, from the discoverer, which melts at the heat of boiling water, and may be fused over a candle in a piece of stiff paper without burning the paper. The bison is a wild animal, with short, black, rounded horns, with a great interval between their bases. On the shoulders is a large hunch, consisting of a fleshy substance. The head and hunch are covered with a long undulated fleece, of a rust-colour, divided into locks. In winter the whole body is covered in this manner; but in summer, the hind part of the body is naked, and wrinkled. The tail is about a foot long, naked, except a tuft of hairs at the end. The fore parts of the body are very thick and strong; the hind parts are slender and weak. These animals inhabit the interior parts of North America, and some of the mountainous parts of Europe and Asia. Pennant alleges that the bison of America is the same species of animal as the bison and aurochs of Europe, the *bonasus*, of Aristotle, the *urus* of Cæsar, the *bos ferus* or wild ox of Strabo, the *bison* of Pliny, and the *biston* of Oppian. Cuvier has not separated the bison of America from that of Europe. He considers their identity as doubtful. This excess is 11 minutes 3 seconds too much; that is, it exceeds the real year, or annual revolution of the earth. Bleaching is now generally performed on the large scale, by means of chlorine or the oxy muriatic acid. One of the most important properties of chlorine, is its bleaching power. which oxygen and hydrogen, propelled by hydrostatic or other pressure, coming from separate reservoirs, in the proportions requisite to form water, are made to unite in a capillary orifice, at the moment when they are kindled. The heat produced, when the focus is formed on charcoal or any non-conducting substance, is such as to melt every thing but the diamond, to burn the metals, and to dissipate in vapour, or in gaseous forms, most known substances. The blow-pipe of Newman, Clarke, &c., is the compound blow-pipe of Dr. Hare, with some unimportant modifications.

Hence, water will boil sooner at the top of a mountain than at the bottom, and this leads us to a method of measuring the height of mountains. Water boils *in vacuo* at 98° of Fahr. A firm hard substance, of a dull white colour, composing some part of the frame of an animal body. The bones of an animal support all the softer parts, as the flesh and vessels. They vary in texture in different bones, and in different parts of the same bone. The long bones are compact in their middle portion, with a central cavity occupied by a network of plates and fibres, and cellular or spongy at the extremities. The flat bones are compact externally, and cellular internally. The bones in a fetus are soft and cartilaginous, but they gradually harden with age. The ends of the long bones are larger than the middle, which renders the articulations more firm, and in the fetus are distinct portions, called epiphyses. Bones are supplied with blood-vessels, and in the fetus, or in a diseased state, are very vascular. They are probably also furnished with nerves and absorbents, though less easily detected in a sound state. They are covered with a thin, strong membrane, called the periosteum, which, together with the bones, has very little sensibility in a sound state, but when inflamed, is extremely sensible. Their cells and cavities are occupied by a fatty substance, called the medulla, or marrow. They consist of earthy matter rather more than half, gelatin one sixteenth, and cartilage about one third of the whole. The earthy matter gives them their solidity, and consists of phosphate of lime, with a small portion of carbonate of lime and phosphate of magnesia. Bones of cattle and other animals are extensively used in the arts, in forming handles for knives, and various other purposes. Bones have latterly been employed as a manure for dry soils, with the very best effect. For this purpose, they are ground to dust, bruised, or broken, into small fragments in mills.—2. Book-keeping rests, like commerce in general, on the notions of debtor and creditor, or on the notions of that which we possess, or are to receive, and that which we are to pay; and is divided into two kinds, viz., book-keeping by *single*, and book-keeping by *double entry*, or Italian book-keeping. In the first, the posts of debtor and creditor are separated from each other, and entered in such a way that each one appears singly; while, in the latter, creditor and debtor are in continual mutual connection. Hence, all the posts are entered doubly, once on the debtor, and once on the creditor side, by which errors or mistakes are prevented. The principle of this system is, that all money and articles received become debtors to him from whom they are received, and, on the other hand, all those who receive money or goods from us, become debtors to cash, or to the goods. **BOOMERANG**, *n.* A missile instrument used by the Australian aborigines. It is of hard wood, about the size of a common reaping hook, and in shape resembling the letter A, but with a rounded top, and no stroke across; in scientific language, the shape is a parabola. It is about 2½ inches broad, ½ inch thick, and 2 feet long, the extremities being rounded. One side is flat, the other is rounded, and it is brought to a bluntish edge. The Boomerang is taken by one end, with the bulged side downwards, and the convex edge forward, and thrown directly onward as if to hit some object standing 30 yards in advance. Instead of going directly forward and there falling to the earth, it slowly ascends in the air, whirling round and round, till it reaches a considerable height, when it begins to retrograde, and finally it sweeps over the head of the projector, and falls behind him. It is one of the ancient instruments of war of the Australian aborigines. They are said to be very dextrous in hitting birds with it.

A very useful distinction is observed by good authors, who, in the sense of *produced*, or brought forth, write this word *born*; but in the sense of *carried*, write it *borne*. This difference of orthography renders obvious the difference of pronunciation. 1. *To be born*, is to be produced, or brought into life. "Man is born to trouble." A man born a prince, or a beggar. It is followed by *of*, before the mother or ancestors.

Man that is born of woman is of few days and full of trouble. *Job xiv.*

**BOROUGH**, *n.* (*bur'ro*.) [*Goth. hauras*; *Sax. burg*, *burh*, *beorh*, *beorg*, *byrig*; *Ir. brog*; *Fr. bourg*; *D. burg* and *berg*; *Arm. bourg*; *G. burg* and *berg*; *Gr. βουρα*; *Ar. borachon*; *Sans. bura*. This word, in Saxon, is interpreted a hill, heap, mountain, fortification, castle, tower, city, house, and tomb. Hence, *Perga*, in Pamphylia, *Bergen*, in Norway, *Burgos*, in Spain, and probably *Prague*, in Bohemia. In *W. ber*, *buere*, signifies a wall, rampart, or work for defence, and *burdais*, is a burgess. But the original sense probably is found in

## BORRACHIO

the verb *Sax. beorgan*, *D. and G. bergen*, *Russ. beregu*, to keep, or save, that is, to make close, or secure. Hence it coincides with *park*, and *L. parvus*, saving. See the next word. If the noun is the primary word, denoting hill, this is from throwing together, collecting; a sense allied to that of making fast or close.] Originally, a fortified city or town; hence a hill, for hills were selected for places of defence. But in later times, the term *city* was substituted to denote an episcopal town, in which was the see of a bishop, and that of *borough* was retained for the rest. At present, the name is given appropriately to such towns and villages as send representatives or burgesses to parliament. Some boroughs are incorporated, others are not.

**BOROUGH**, *n.* (*bur'ro*.) [*Sax. borhœ*, a surety; *borgian*, to borrow; *borg*, interest; *burga*, a debtor, a surety; *borg-weed*, a promise, or bond for appearance, a pledge; *borg-bryce*, *burg-break*, violation of pledge; *borg-hand*, *borh-hand*, a surety, or bail; *beorgan*, to keep, guard, or preserve; *G. and D. borgen*, to borrow. See the preceding word.] In *Saxon times*, a main pledge, or association of men, who were sureties or free pledges to the king for the good behaviour of each other, and if any offence was committed in their district, they were bound to have the offender forth-coming. The association of ten men was called a *tithing*, or *decennary*; the presiding man was called the *tithing-man*, or *head-borough*; or in some places, *borsholder*, *borough's elder*. This society was called also *friburg*, free burg, frank pledge. Ten tithings formed a *hundred*, consisting of that number of sureties, and this denomination is still given to the districts comprehended in the association. The term seems to have been used both for the society and for each surety. The word *main*, hand, which is attached to this society, or their mutual assurance, indicates that the agreement was ratified by shaking hands. Some writers have suggested that the application of this word to towns sprung from these associations, and of course was posterior to them in time. But the word was used for a town, or castle, in other nations, and in Asia, doubtless long before the origin of the *frank pledge*. In *Connecticut*, this word, *borough*, is used for a town, or part of a town, or a village, incorporated with certain privileges, distinct from those of other towns and of cities. In *Scotland*, a *burgh* is a body corporate, consisting of the inhabitants of a certain district, erected by the sovereign, with a certain jurisdiction. [See *BURGH*.] Boroughs are erected to be held of the sovereign, as is generally the case of royal boroughs; or of the superior of the lands included, as in the case of boroughs of regality and barony. Royal boroughs are generally erected for the advantage of trade. —*Borough English*, is a customary descent of lands and tenements to the youngest son, instead of the eldest; or if the owner leaves no son, to the youngest brother. —*Borough-head*, the same as *head-borough*, the chief of a borough.

**BOT'ANY**, *n.* [Gr. *botanē*, a plant; Pers. *botah*, a shrub; probably allied to *bud*, to shoot.] *Botany* is the science of the structure of plants, the functions of their parts, their places of growth, their classification, and the terms which are employed in their description and denomination. The Linnean system of botany is founded exclusively on the relations of the sexual parts of plants. Linneus divided all known plants into two general divisions, one of which has visible sexual parts, (*phanerogamous*), while in the other they are invisible or

## BOTCHER

wanting, (*cryptogamous*.) The first division comprehends the twenty-three first classes of his system, which are distinguished according to the situation of the sexual parts in the same, or in separate flowers, their number, their length, &c. The *cryptogamous* plants form his twenty-fourth class. These twenty-four classes are subdivided into *orders*, and the orders into *genera*, and the genera into *species*. Later botanists have adopted a more natural arrangement, founded upon the internal structure, as well as the external relations, analogies, and differences. The most perfect natural system is that of Jussieu, particularly as enlarged by DeCandolle. The parts of plants are distinguished generally into the root, the stem, the bud, the leaf, the inflorescence, and the fructification. The natural system aims at arranging plants according to their agreement in all essential characters. It endeavours to associate plants which agree in structure and properties. The Linnean system is a good index for finding the name of a plant. The natural system explains its organization or qualities. There is no study which better illustrates the connection of the natural sciences than botany: if viewed philosophically, it will be found inseparable from physiology, chemistry, geology, physical geography, medicine, and various other sciences. Its relations to medicine are immediate and important; the anatomy and physiology of plants form an indispensable part of the general science of life, and a large proportion of the substances which form the materia medica, are derived from the vegetable kingdom.

It is found near the Passaic falls in New Jersey.

**BOTRYTIS**, *n.* One of the obscure parasitical genera of fungi, to which what is called *mildew*, is often attributable. In Ger. *buttel*, a bag, a purse, seems to be the Sp. *botilla*. In Fr. *botte* is a hoot, a bunch, or bundle, *botte de foin*, a bottle of hay. It would seem that *bottle* is primarily a bag, and from the sense of swelling, bulging, or collecting into a bunch; if so, the word was originally applied to the bags of skins used as bottles in Asia. Yet the primary sense is not easily ascertained. The Arabic has

Bottle (Oriental Water Carrier).

*batta*, a duck, Sp. *pato*, and "urceus coccineus in quo liquidiora circumfer-

unt viatores." 1. A hollow vessel of glass, wood, leather, or other material, with a narrow mouth, for holding and carrying liquors. The Oriental nations use skins or leather for the conveyance of liquors; and of this kind are the bottles mentioned in Scripture: "Put new wine into new bottles." In Europe and America, glass is used for liquors of all kinds; and farmers use small cags or hollow vessels of wood, which are called *bottles*. The small kinds of glass bottles are called vials or phials.—2. The contents of a bottle; as much as a bottle contains; but from the size of bottles used for wine, porter, and cider, a bottle is nearly a quart; as, a bottle of wine or of porter.—3. The contract of bottomry is in the nature of a mortgage; the owner of a ship borrowing money to enable him to carry on a voyage, and pledging the ship as security for the money. If the ship is lost, the lender loses the money; but if the ship arrives safe, he is to receive the money lent, with the interest or premium stipulated, although it may exceed the legal rate of interest. The tackle of the ship also is answerable for the debt, as well as the person of the borrower. When a loan is made upon the goods shipped, the borrower is said to take up money at *respondentia*, as he is bound personally to answer the contract.

2. To rebound—but the sense is the same. *BOUND*, *pret.* and *pp.* of *Bind*. As a

participle, made fast by a band, or by chains, or fetters; obliged by moral ties; confined; restrained.—2. As a participle, or perhaps more properly an adjective, destined; tending; going, or intending to go; with *to* or *for*; as, a ship is bound to Cadiz, or for Cadiz. The application of this word, in this use, is taken from the orders given for the government of the voyage, implying obligation, or from tending, stretching. So *destined* implies being bound. *Bound* is used in composition, as in *ice-bound*, *wind-bound*, when a ship is confined or prevented from sailing by ice, or by contrary winds.

**BOUND'ARY**, *n.* A limit; a bound. This word is thus used as synonymous with *bound*. But the real sense is, a visible mark designating a limit. *Bound* is the limit itself or furthest point of extension, and may be an imaginary line; but *boundary* is the thing which ascertains the limit; *terminus*, not *finis*. Thus, the bounds of a parish are defined by certain marks, or *boundaries*, such as heaps of stones, dykes, hedges, ditches, rivers, streams, rivulets, &c. But the two words are, in ordinary use, confounded.

**BOUND-BAILIFF**, *n.* An officer appointed by a sheriff to execute process; so denominated from the *bond* given for the faithful discharge of his trust.

**BOUN'TY**, *n.* [Fr. *bonté*, goodness, excellence, favour; It. *bontà*; L. *bonitas*, from *bonus*, good.] 1. Liberality in bestowing gifts and favours; generosity; munificence. The word includes the gift, or favour, and the kindness of disposition with which it is bestowed; or a favour bestowed with a benevolent disposition. This distinguishes it from a mere gift. It is also observed by Johnson, that it differs from *charity*, as a *present* from an *alms*, in not being bestowed upon persons absolutely necessitous. This is often the case; but *bounty* includes *charity*, as the genus comprehends the species; *charity*, however, does not necessarily include *bounty*, for *charity*, or an *alms*, may be given with reluctance. The word may be used also for a free gift; 2 Cor. ix. 5; or a disposition to give, without the gift; goodness in general.—2. **BRAMAH PRESS**, *n.* [From its inventor, Mr. Bramah.] A most valuable hydrostatic machine, by which an immense amount of power, available for compressing goods, or drawing or lifting great weights, may be produced. The action of the machine depends on the well-known principle in hydrostatics, that fluids press equally in all directions. By means of a small forcing pump, A, water is injected into a strong cast-iron cylinder, B, into which is fitted the piston or ram, C. The water acting upon the solid piston, C, slowly and powerfully urges upwards the table, D, until the requisite pressure is produced upon the materials placed between the upper and lower tables of the press. The power of this machine increases in pro-

portion to the difference between the diameter of the forcing pump and that of the large cylinder. Thus, supposing the area of the forcing pump piston to be one square inch, and that of the ram a hundred square inches; then, if the pump piston be forced down with a

Bramah Press.

pressure of 10lbs., this pressure will be communicated to each square inch of the area of the ram, which will consequently be forced upwards with a pressure of 10 times 100, that is 1000lbs. The forcing pump is supplied with a steel-yard safety-valve, and a screw cock for relieving the press.

Among rude nations, bridges are sometimes formed of other materials; and sometimes they are formed of boats, or logs of wood lying on the water, fastened together, covered with planks, and called floating bridges. A bridge over a marsh is made of logs or other materials laid upon the surface of the earth. *Pendunt*, or *hanging bridges* are not supported by post, but by the peculiar structure of the frame, resting only on the abutments. In *suspension* or *chain bridges*, the flooring, or main body of the bridge, is supported on strong iron chains, or rods hanging in the form of an inverted arch from one point of support to another. The points of support are the tops of strong pillars, or small towers, erected for the purpose at each extremity of the bridge. Over these pillars the chains pass, and are attached beyond them to rocks, or massive frames of iron firmly secured under ground. The flooring is connected with the chains by means of strong upright iron rods. A *draw bridge* is one which is made with hinges, and may be raised or opened. Such bridges are constructed in fortifications, to hinder the passage of a ditch or moat; and over rivers, that the passage of vessels may not be interrupted. A *flying bridge* is made of pontoons, light boats, hollow beams, empty casks or the like. They are made, as occasion requires, for the passage of armies. ## BRIG

**BRIEF**, *n.* [In this sense the word has been received into most of the languages of Europe.] 1. An epitome; a short or concise writing. This is the general sense of the word, as explained by Zonaras on the council of Carthage. It was thus used as early as the third century after Christ. In modern times, an *apostolical brief* is a letter which the pope dispatches to a prince, or other magistrate, relating to public affairs. A *brief* is distinguished from a *bull*, in being more concise, written on paper, sealed with red wax, and impressed with the seal of the fisherman, or Peter in a boat. A *bull* is more ample, written on parchment, and sealed with lead or green wax.—2. In law, an abridgement of a client's case, made out for the instruction of counsel on a trial at law. Also, a writ summoning a man to answer to any action; or any precept of the king in writing, issuing from any court, whereby he commands a thing to be done. In *Scots law*, a writ issuing from the chancery, directed to any judge ordinary, commanding and authorizing that judge to call a jury to inquire into the case, and upon their verdict to pronounce sentence. The word is generally written *brieve*, in *Scots law* documents. There are several kinds of brieves, as a *brieve of inquest*, *brieve of tutor*, *brieve of terre*, &c. These writs seem at one time to have been the foundation of almost all civil actions in Scotland.—3. In *New England*, a letter patent, from proper authority, authorizing a public collection or charitable contribution of money, for any public or private purpose.—4. A writing in general. In music, the word is now written *breve*.

**BRIGADE**, *n.* [Fr. *brigade*; Sp. and Port. *brigada*; perhaps from Ar. *farihon*, agmen, turba hominum major, that is, a division, from *faraka*, to break. This word comes to us from the south of Europe, and may have been introduced into Spain by the Moors. If this conjecture is not well founded, we know not the origin of the word. See *CAST. HIST. COL.* 3084.] A party or division of troops, or soldiers, whether cavalry or infantry, regular or militia, commanded by a brigadier. Heb. Syr. and Eth. *berch*, to shine, or more probably, Eth. *barach*, to shine, as the Eth. participle *berht* or *bercht*, corresponds exactly with the Saxon. I have not found this word in any other Teutonic or Gothic language, and the original verb is lost in the Saxon. In Saxon, *beorhtweila* or *brihtweila* signifies a moment, the twinkling of an eye. This directs us to the primary sense of the verb, to shine, which is, to shoot, to dart, to glance. That this is the primary sense, we have evidence from the Sax. *bryhtm*, which is a derivative from *bryht*, and which signifies a *moment*, that is, the time of a shoot, or darting, like *glance*.] 1. ## BRING

*bringan*; *Dan. bringer*; *Ger. bringen*; *Goth. briggan*. We see by *bringan*, *D. brayt*, and the Gothic *briggan*, that it is not radical.] 1. To fetch; to bear, convey, or lead from a distant to a nearer place, or to a person; as, *bring* me a book from the shelf; *bring* me a morsel of bread. In this sense, it is opposed to *carry*, and it is applied to the person bearing or leading, in opposition to *sending* or *transmitting* by another.—2. To produce; to procure as a cause; to draw to.

Nothing *brings* a man more honour than to be invariably just.

3. To attract or draw along.

4. To cause to come; to cause to proceed from a distant place, in company, or at the same time; as, to *bring* a boat over a river; to *bring* a horse or carriage; to *bring* a cargo of dry goods.—5. To cause to come to a point, by moral influence; used of the mind, and implying previous remoteness, aversion, alienation, or disagreement; as, to *bring* the mind to assent to a proposition; or to *bring* a man to terms, by persuasion or argument. In this sense it is nearly equivalent to *persuade*, *prevail upon*, or *induce*. The same process is effected by custom, and other causes. Habit *brings* us to relish things at first disagreeable; reflection *brings* a man to his senses, and whether the process is slow or rapid, the sense of the verb is the same.

To *bring* to mind what has been known before and forgotten, is to *recall*; but the sense of *bring* is the same. The primary sense is to *lead*, *draw*, or *cause to come*; the sense of *conveying* or *bearing* is secondary. The use of this verb is so extensive, and incorporated into so many peculiar phrases, that it is not easy to reduce its significations within any precise limits. In general, the verb *bring* implies motion from a place remote, either in a literal or figurative sense. It is used with various modifying words.—To *bring back*, is to recall, implying previous departure, either in a literal or figurative sense.—To *bring about*, to bring to pass; to effect; to accomplish; to bring to the desired issue.—To *bring forth*, is to produce, as young or fruit; also, to bring to light; that is, to make manifest, to disclose.—To *bring forward*, to cause to advance; to produce to view.—To *bring in*, to import; to introduce; to bear from a remote place within a certain precinct; to place in a particular condition; to collect things dispersed; to reduce within the limits of law and government; to produce, as income, rent, or revenue; to induce to join, &c.—To *bring off*, to bear or convey from a distant place, as to *bring off* men from an isle; also, to procure to be acquitted; to clear from condemnation; to cause to escape.—To *bring on*, to cause to begin, as to *bring on* an action; also, to originate or cause to exist, as to *bring on* a disease; also, to bear or convey from a distance, as to *bring on* a quantity of goods; also, to attend, or to aid in advancing, as to *bring on* his way.—To *bring over*, to bear across, as to *bring over* despatches, to *bring over* passengers in a boat; also, to convert by persuasion or other means; to draw to a new party; to cause to change sides, or an opinion.—To *bring out*, to expose; to detect; to bring to light from concealment; as, to *bring out* an ac-

complice or his crimes.—*To bring under*, to subdue; to repress; to restrain; to reduce to obedience; also, to bring beneath any thing.—*To bring up*, to nurse; to educate; to instruct; to feed and clothe; to form the manners, and furnish the mind with knowledge. The phrase may comprehend all these particulars. Also, to introduce to practice, as *to bring up* a fashion or ceremony; also, to cause to advance near, as *to bring up* forces, or the body of reserve; also, to bear or convey upward. In navigation, to cast anchor.—*To bring down*, to cause to come down; also, to humble or abase, as *to bring down* high looks.—*To bring to*, in navigation, to check the course of a ship, by arranging the sails in such a manner, that they shall counteract each other, and keep her nearly stationary. She is then said to *lie to*. The phrase is used also in applying a rope to the captain.—*To bring by the lee*, to incline so rapidly to leeward off the course, when a ship sails large, as to bring the lee side suddenly to the windward, and by laying the sails aback, expose her to the danger of oversetting.

The word is applicable to a like circle in other round holes, as to the key-hole of a watch, the vent of a gun, &c. A dry measure, containing eight gallons, or four pecks. The standard English bushel, by Stat. 12 Henry VII., contains eight gallons of wheat, each gallon eight pounds of wheat, troy weight; the pound, twelve ounces troy; the ounce, twenty sterlings, and the sterling, thirty-two grains of wheat growing in the middle of the ear. The contents are 2145.6 solid inches, equivalent to 1131 ounces and 14 pennyweights troy. By a law passed in 1824, put in operation Jan. 1, 1826, the imperial bushel superseded all others. This has a capacity of 2218.192 cub. in., and holds 80 lbs. avoirdupois of distilled water. Heaped up measure was long used for dealing out certain commodities sold by the bushel; but in 1831 and 1835, this system was declared illegal, and the *strike*, or level surface, measure was alone thenceforth ordained and enforced by law. A roller is now employed to remove, or strike off, all of the article measured which stands above the rim of the measure. Bushel signifies both the quantity or capacity, and the vessel which will contain the quantity.—2. In *popular lan.*, a large quantity indefinitely.—3. **BUSS**, *n.* [Per. *bosidan*; Ar. *bausa*, to kiss; L. *basio*; Fr. *baiser*; Norm. *baser*; It. *baciare*; D. *poezen*, to kiss. The verb may be from the noun, and perhaps from the name of the lip; at any rate, from the same radical sense, to push; Per. *yuz*, the lip; W. and Ir. *bua*, the lip; D. *poes*, a kiss, a puss, a fur-tippet, a girl; Sp. *beso*, a kiss; Port. *beico*, the lip; *beijo*, a kiss; It. *bario*. The Italians use the word for the trunk of the body from the neck to the hips.

Bust.

This fowl grows to the weight of twenty-five or twenty-seven pounds, with a breadth of wing of six or seven feet. It inhabits England, feeding on green corn and other vegetables, and on earth-worms. It runs fast and takes flight with difficulty.

**BUSTLE**, *v. i.* (bus'l.) [This word may be allied to *bust*, or to Lat. *festino*.] To stir quick; to be very active; to be very quick in motion, often or usually with the sense of noise or agitation.

This word appears, from the Dutch, to be composed of *be*, the prefix, and *zig*, the root of *see*, contracted in Inf. to *zien*, but retained in the *ppr.*]

# BUT

*zag*, and in the derivatives, *zigt*, sight, *zichtbaar*, visible. We find *bezigtigen* signifies to view. If this opinion is correct, the primary sense is seeing, or closely inspecting.] 1. **BUT**, *part.* for *butan*. [Sax. *butan*, *buton*, *buta*, *bute*, without, on the outside, abroad; hence, except, or excepting, besides; that is, separated, not included. The verb is not in the Saxon; but in Dutch we have the verb in its primary sense, *buiten*, to rove, or wander, to go freebooting; *but*, booty; *buiten*, out, without, abroad, besides, except; *buiten board*, over board; *buiten deur*, out of doors; *buiten huis*, an outhouse; *buiten man*, an out-man, a stranger; Ger. *brute*, booty; Sw. *bytte*, booty; *byta*, to exchange; Dan. *bytte*, booty, a parting, division, distribution; *bytter*, to part, divide, exchange, barter. The primary sense of *booty* is to rove, or wander, to part, or separate from; applied to persons, it is to wander; applied to things, it may include stripping. *But* then is a contraction of *butan*, and primarily a participle.] 1. Except; besides; unless.

Who can it be, *but* perjured Lyon. *Smith*. That is, removed, separated, excepted. Lyon being separated, or excepted, who can it be?

And *but* infirmity.

Which waits upon worn times, hath something seized

His wish'd ability, he had himself

The lands and waters measured. *Shak.*

That is, except, unless, separate this fact, that infirmity had seized his ability, he had measured the lands and waters. In this use *but*, *butan*, is a participle equivalent to *excepting*, and may be referred to the person speaking, or more naturally, it is equivalent to *excepted*, and with the following words, or clause, forming the case absolute.

Who can it be Lyon being excepted?

And *but* my noble Moor is true of mind, it were enough to put him to ill thinking. *Shak.*

It cannot be *but* nature hath some director of infinite power, to guide her in all her ways *Hooker*.

There is no question *but* the King of Spain will reform most of the abuses. *Addison*.

It is not impossible *but* I may alter the complexion of my play. *Dryden*.

In the last three examples, *that* is omitted after *but*.

# BUT

It is not impossible *but* that I may alter the complexion of my play.

In these and all similar phrases *but* denotes separation, exception.—2. Only; as, there is *but* one man present.

A formidable man, *but* to his friends. *Dryden*.

This use of *but* is a modern innovation; but perhaps too firmly established to be corrected. In all such phrases, a negative, *not*, *nothing*, or other word, is omitted. He is *not* a formidable man, *but* to his enemies, that is, except. There is *not* *but* one man present, that is, there is *not* except or *besides* one present. So also, "Our light affliction is *but* for a moment;" 2 Cor. iv. Our affliction is *not*, *except* for a moment.

If they kill us we shall *but* die; 2 Kings vii.

The common people in America retain the original and correct phrase; usually employing a negative. They do not say, I have *but* one. On the other hand, they say, I have *not* *but* one, that is, I have *not* except one; except one, and I have none. This word *but* for *butan* is not a conjunction, nor has it the least affinity to that part of speech.

**BUT**, *conj.* [Sax. *bote*, reparation, satisfaction, compensation; and adverbially, moreover further, that is, something added to make good, to supply that which is wanted, from *betan*, to make better, or more, to amend, that is, to advance; D. *borte*; Sw. *büete*; Dan. *bande*; W. *buz*, advantage. So in Ger. *aber*, but, is the Eng. *over*. In some of these languages it denotes a fine, or penance, that which makes satisfaction. In Danish, profit; *bander*, to gain, or profit; W. *buziaw*; Goth. *botjan*, id.; Ger. *buss*, *büssen*. We use this word as a noun, in the phrase, He gives a guinea to *boot*, that is, to make good, to satisfy, or by way of addition; and as a verb, in the phrase, What *boots* it, what gain or profit is it. It is radically the same word as *bet* in *better*; and the radical sense is to advance.] More; further; noting an addition to supply what is wanting to elucidate, or modify the sense of the preceding part of a sentence, or of a discourse, or to continue the discourse, or to exhibit a contrast.

Now abide faith, hope, charity, these three; *but* the greatest of these is charity; 1 Cor. xiii.

When pride cometh, then cometh shame; *but* with the lowly is wisdom; Prov. xi.

Our wants are many and grievous; *but* quite of another kind.

The house of commons were well agreed in passing the bill; *but* the house of lords rejected it.

This word is in fact a noun equivalent to addition or supply; but in grammatical construction, no inconvenience results from considering it to be a connective.

**BUT**, *n.* [Fr. *bout*, end, extremity, and *but*, end, aim, design; Arm. *but* or *baut*. It is sometimes written *butt*, especially when applied to the end of a plank. It coincides, in sense and elements, with Lat. *peto*, Sp. *bote*, a thrust, *botar*, to cast, It. *botta*, *botto*, *botlare*, Fr. *bote*, *bouder*, Eng. *pout*, and many other words. See **BUTT**.] 1. An end; a limit; a bound. It is used particularly for the larger end of a thing, as of a piece of timber, or of a fallen tree; that which grows nearest the earth. **BY**, *prep.* [Sax. *be* or *big*; Goth. *bi*; Sw. and Dan. *be*; D. *by*; Ger. *bei*; all contracted from *big*. This word in composition is often written *be*, as in *because*, *besiege*. In Sw. and Dan. it is used only in composition. The Sw. and Dan. *paa*, and Russ. *po*, may be from a different root, although they are nearly allied in signification, and may be the same word differently written. This preposition occurs as a prefix in all the Shemitic languages, contracted indeed into *b*. The primary sense is, *pressing, close, near, at*; but in Goth. and Sax. it signifies also, *about, according to, on, with, against, after*, &c. In some of these senses, it coincides with the Russ. *po*. The original verb to which this word belongs, most probably signifies to pass, to go, or come, to drive, to press. 1. Near; close: as, sit *by* me; that house stands *by* a river. So in It. *presso*, from Lat. *pressus*; Fr. *près*, *auprès*.—2. Near, in motion; as, to move, go, or pass *by* a church. But it seems, in other phrases, or with a verb in the past time, to signify *past*, gone beyond; as, the procession is gone *by*; the hour is gone *by*; John went *by*. We now use *past* as an equivalent word,—the procession is gone *past*. *Gone by*, is in strictness tautology, as now used: but possibly *by* signifies primarily *near*.—3. Through, or with, denoting the agent, means, instrument, or cause; as, a city is destroyed *by* fire; profit is made *by* commerce; to take *by* force. This use answers to that of the Latin *per*, through, denoting a passing, acting, agency, or instrumentality.—4. "Day *by* day;" "year *by* year;" "article *by* article." In these phrases, *by* denotes passing from one to another, or each particular separately taken.—5. "*By* the space of seven years." In this phrase, *by* denotes through, passing or continuing, during.—6. "*By* this time, the sun had risen." The word here seems to denote, *at, present, or come to*.—7. According to; as, this appears *by* his own account; these are good rules to live *by*.—8. On; as, to pass *by* land or water; great battles *by* sea and land. In the latter phrase, *at* or *on* might be substituted for *by*.—9. It is placed before words denoting quantity, measure, or proportion; as, to sell *by* the pound; to work *by* the rod or perch; this line is longer *by* a tenth.—10. It is used to represent the means or instrument of swearing, or affirming; as, to swear *by* heaven, or *by* earth; to affirm *by* all that is sacred.—11. In the phrase, "he has a cask of wine *by* him," *by* denotes nearness or presence.—12. "To sit *by* one's self," is, to sit alone, or without company.—13. "To be present *by* attorney." In this phrase, *by* denotes means or instrument; through or in the presence

## BY-PAST

of a substitute.—14. In the phrase, "North *by* West," the sense seems to be north *passing* to the west, inclining or going westward, or near west. As an adverb, *by* denotes also nearness, or presence; as, there was no person *by* at the time. But some noun is understood. So in the phrase, "to pass or go *by*," there is a noun understood.—*By* and *by*, is a phrase denoting nearness in time; in a short time after; presently; soon.

When persecution ariseth, because of the word, *by* and *by* he is offended; Mat. xiii. *By* the *by* signifies, as we proceed or pass, [Fr. *en passant*], noting something interposed in the progress of a discourse, which is distinct from the main subject. The old phrase, "on the *by*," on the passage, is now obsolete.—*To stand by*, is to stand near, or to support. *By*, in *lullaby*, and in the nursery, a word used in lulling infants to sleep, is evidently allied to words found in many languages, signifying to rest, or be quiet, or to appease; that is, to press, to stop, as the Gr. *ταυω*, Lat. *paco*. It is used in Russian, as with us, *bayu*, *bui*. This probably is the same word as the foregoing.—*By* or *bye*, in *by-law*, Sax. *bilage*, is probably the Sw. *by*, Dan. *bye*, a village, town, borough, or city, from Sw. *byggia*, Dan. *bygger*, Ger. *bauen*, D. *bouwen*, to build, Sax. *byan*, to inhabit; that is, a town-law, a municipal law. In the common phrase, *good-bye*, *by* signifies *passing, going*. The phrase signifies, a good going, a prosperous passage, and it is precisely equivalent to *farewell*, Sax. *faran*, to go, *go well*, may you have a good going, equivalent to *good speed*, in the phrase, "to bid one good speed." [Not *God speed*, as is generally read and understood.]—*By* is used in many compound words, in most of which we observe the sense of nearness, closeness, or a withdrawing or seclusion.

Societies *not incorporated* by charter also enact by-laws, which, however, are only binding upon their members.

## CABAL

**C**, the third letter in the English alphabet, and the second articulation or consonant, is a palatal, nearly corresponding in sound with the Gr. *κ*, *kappa*, and with the Hebrew *ק*, *qaph*. It bears a middle place in pronunciation, between the aspirate *ח*, *he*, and the palatal *ג*, *g*. It is a Roman character, borrowed from the Gr. *κ*, or from the oriental *ק*, *q*, which was used in languages written from right to left, and when inverted and the corners rounded, becomes *C*. In the old Etruscan, it was written *ϸ*, with the corners rounded, but not inverted; in Arcadian, *C*, as now written. That its sound in Latin was the same, or nearly the same as that of *kappa*, may be known from the fact, that the Greeks, while the Latin was a living language, wrote *kappa* for the Roman *C*. Perhaps the same character may be the basis of the Arabic *ق*. As an abbreviature, *C* stands for Caius, Carolus, Ciesar, *condemno*, &c., and *CC* for *consulibus*. As a numeral, *C* stands for 100; *CC* for 200, &c. In music, *C* after the clef, is the mark of common time; and when a bar is perpendicularly drawn through it, *alla-breve* time is indicated. *C* is also the first note of the diatonic scale, answering to the *do* of the Italians, and the *ut* of the French. It gives a name to the natural major mode, and is likewise used as the abbreviation of *contrateno*, or *contralto*. In English, *C* has two sounds, or rather it represents two very different articulations of the organs; one close, like *K*, which occurs before *a*, *o*, and *u*; the other, a sibilant, precisely like *s*, which occurs before *e*, *i*, and *y*. The former is distinguished in this vocabulary by *C*, which may be called *kr*. In Russ., *C* is precisely the English *s*, as it was in the old Greek alphabet. *C* before *h* is mute; as, in *brick, sick*.

[Fr. *cabale*, a club, society, or combination; It. *cabala*, knowledge of secret things; Sp. *cabala*, secret science; *cabal*, perfect, just, exact; Heb. *חבל*, *habal*, to take, receive, accept. This word seems to include the significations of several biliteral roots. Qu. *W. cafael*, to get or obtain; or *gacaelu*, to hold. The primary sense of the root seems to be, to catch or seize by rushing on, or in general, to press, to drive; hence, the sense of collection, combination, and accusation.] 1. A number of persons united in some close design; usually to promote their private views in church or state by intrigue. A junto. It is sometimes synonymous with *faction*, but a *cabal* usually consists of fewer men than a party, and the word generally implies close union and secret intrigues. This name was given to one ministry of Charles II. Clifford, Ashley, Buckingham, Arlington, and Lauderdale, the initials of whose names compose the word.—2. Intrigue; secret artifices of a few men united in a close design.

These lists are appointed to remain exhibited on the walls of the outer house during the forenoon of the calling days, and also to be printed and circulated amongst practitioners, so as to admit of the defender's agent entering appearance for him at the clerk's office in the course of the evening of the calling day, and to give full intimation to all concerned. *Calling of a suspension or advocacy*, a form of process in *Scots law*, in all respects analogous to the calling of a summons.

*Caloric expands all bodies.* *Henry.* Although the term *caloric* has been introduced into modern chemistry, to express the cause, or principle of heat, in distinction from the sensation or the effects produced by that principle, yet the distinction has not always been attended to, the common word *heat* being still frequently used to signify both the cause and its effects. It must be observed, however, that this double use of the term *heat* seldom leads to any ambiguity; so that the term *caloric* does not seem to be indispensably necessary. [*See HEAT.*]

**CALOTYPE**, *n.* [*Gr.* *καλος*, beautiful, and *τυπος*, figure, impression.] The name given by *Mr. Talbot*, to the process which he invented of producing copies of natural objects, and pictures, by the action of light upon nitrate of silver. The process is analogous to that of the *Daguerreotype*, although the inventor was led to it without any knowledge of the labours of the French philosophers. By means of this invention, the most perfect copies of landscapes, natural objects, and portraits of living persons, may be obtained upon paper previously prepared for the purpose, by the agency of clear day-light. It possesses several advantages over the *Daguerreotype* process; it gives a greater breadth and massiveness to its landscapes and portraits; it is attended with far less expense; and in point of portability, permanence, and facility of examination, the calotype picture possesses a peculiar advantage. A large quadruped used in Asia and Africa for carrying burdens, and for riders. As a genus, the camel belongs to the order of Pecora. The characteristics are: it has no horns; it has six fore teeth in the under jaw; the canine teeth are wide set, three in the upper and two in the lower jaw; and there is a fissure in the upper lip. The dromedary or Arabian camel has one hump on the back, four callous protuberances on the

fore legs, and two on the hind legs. The Bactrian camel has two bunches on the back. The Llama of South America is a smaller animal, with a smooth back, small head, fine black eyes, and very long neck. The Pacos

Bactrian Camel.

or sheep of Chili has no bunch. Camels constitute the riches of an Arabian, without which he could neither subsist, carry on trade, nor travel over sandy deserts. Their milk is his common food. By the camel's power of sustaining abstinence from drink for many days, and of subsisting on a few coarse shrubs, he is peculiarly fitted for the parched and barren lands of Asia and Africa. The hair of the camel is imported into this country chiefly for the purpose of being manufactured into fine pencils for drawing and painting. In the East, however, it serves for the fabrication of tents, carpets, and wearing apparel. The most esteemed hair comes from Persia.—2. In Holland, Camel, [or Kameel, as Coxe writes it,] is a machine for lifting ships, and bearing them over the Pampus, at the mouth of the river Y, or over other bars. It is also used in other places, and particularly at the dock in Petersburg, to bear vessels over a bar to Cronstadt. CAMEL-BACKED, *a*. Having a back like a camel.

On the forehead is a tubercle, two inches high, resembling another horn. The fore legs are not much longer than the hind ones, but the shoulders are of such a vast length, as to render the fore part of the animal much higher than the hind part. The head is like that of a stag; the neck is slender and elegant, furnished with a short mane. The colour of the whole animal is a dirty white, marked with large broad rusty spots. This animal is found in the central and eastern parts of Africa. It is timid and not fleet.

CAMEO, CAME'IEU, or CAMAY'-EU, *n*. [*L. gemma*; *fr. cammeo*; *Fr. cammeu*, probably from the oriental *camehuia*, or *camehouia*, a name given to the onyx.] A general name for all stones cut in relief, *anaglyphs*, in contradistinction to those hollowed out, *intaglios*. More particularly a *cameo* is a stone composed of several different coloured layers having a subject in relief cut upon one or more of the upper layers, an under layer forming the ground. The subject and ground are thus obtained of different colours. For this purpose the ancients used the onyx, sardonyx, agate, anythet, &c. But as stones of different coloured layers were not plentiful, the ancients also made fictitious cameos. The art of cutting these stones is very ancient, and appears to have come from India to Persia and other Asiatic nations, especially the Phœnicians, then to the Egyptians, and latterly the Greeks and Romans. Cameos were used for decorating the person, and were also set as ornaments in drinking vessels, vases, &c. The shell of a certain bivalve is now much used for making cameos, the subject being wrought on the outer or white crust of the shell, and the under pink one serving for the ground.—2. A stone on which are found various figures or representations of landscapes, a kind of *lusus nature*, exhibiting pictures without painting.—3. *Camaiieu* also signifies a painting in one colour, and where the lights and shades are of gold wrought on a golden or azure ground. This work is chiefly used to represent basso-relievos.

CAM'ERA LU'CIDA, *n*. An invention of the late Dr. Wollaston, for the purpose of facilitating the delineation of distant objects, by producing a reflected picture of them upon the paper, and also copying or reducing drawings. It consists of a solid prismatic piece of glass, mounted upon a brass frame. The prism has its angles so arranged, that the rays from the object are reflected upon the paper, and is covered at top by a metallic eye-piece, the hole in which lies half over the edge of the prism, so as to afford a person looking through, a view of the picture reflected through the glass, and a direct view of his pencil or tracing point. In the fig., the object *f* to be traced, is opposite the perpendicular surface of the prism *d, c*, and the rays proceeding from *f* pass through this surface and fall on the inclined plane *c b*, making an angle with *d c* of  $67\frac{1}{2}^\circ$ ; from this they are

## CAMERA OBSCURA

reflected at an equal angle to the plane *b a*, making an angle of  $135^\circ$  with *b c*, and are again reflected to the eye at *e*, above

Camera Lucida.

the horizontal plane, which makes an angle of  $67\frac{1}{2}^\circ$  with the last reflection. The rays of light from the object, proceeding upwards from *h* towards the eye of the observer, the observer will be led to imagine the image at *m*, and by placing the paper below in this place, the image may be traced with a pencil. The brass frame of the prism has usually two lenses, one concave and the other convex, the former to be used in front between *f* and *d c*, for short-sighted persons, and the latter at *e* for long sights. The size of the picture may also be increased or diminished, by lengthening or shortening brass tubes connected with the frame. This instrument has undergone various modifications. It is extremely convenient on account of its portability.—2. A gem cut in relief; fine carving on precious stones and shells.

CAM'ERA OBSCU'RA, or *dark chamber*; in optics, an apparatus representing an artificial eye, in which the images of external objects, received through a double convex glass, are exhibited distinctly, and in their native colours, on a white matter, in the machine, in the focus of the glass. The simplest form of this instrument consists of a darkened chamber, into which no light is permitted to enter, except by a small hole in the window shutter. A picture of the objects opposite the hole will then be seen on the wall, or a white screen placed so as to receive the light coming from the opening. A convex lens may be fixed in the hole of the shutter. Portable *camera obscuras*, are constructed of various forms, but the design of them all is to throw the images of external objects, as houses, trees, landscapes, &c., upon a plane or

curved surfaces, for the purpose of drawing or amusement. The fig. represents the revolving camera obscura. The rays coming from the object *a*, is received on a mirror *b*, placed in a square box, and inclined to the horizon at an angle of  $45^\circ$ . This mirror, with the box, is capable of being turned round, so that the opening in the side of the box where the rays enter, may

face the object or objects to be delineated. The rays which fall upon the mirror are reflected, and passing through the convex lens, are converged to a focus, and form an image of the object *a*, which is seen through an opening in the sides of the chamber at *d*. The surface on which the image is seen may be white paper, and thus by introducing the hand, the figures may be traced with a pencil; but the picture is most distinctly seen when the image is formed on the back of a silvered mirror. The invention of the camera obscura is due to Friar Bacon, although it has been attributed by some to Baptista Porta.

importance. It has the property of being impervious to water, and means have been discovered of reducing it to a state of solution. When thin filaments of it are spread over cloth, or any other substance, it is rendered impervious alike to air and water. Resembling a hair, fine, minute, small in diameter, though long; as, a *capillary* tube or pipe; a *capillary* vessel in animal bodies, such as the ramifications of the blood-vessels. *Capillary tubes*, in physics, are tubes with very small bores, of which the diameter is only a half, a third, a fourth, &c., of a line. If a tube of this sort, open at both ends, be taken, and one of its ends immersed in water, the water will rise within the tube to a sensible height above the surface of the water in the vessel, the height being inversely as the diameter of the bore, or the smaller the bore, the greater the height. Different liquids rise in capillary tubes to different heights. The rise is supposed to be owing to the attraction which subsists between water and glass, as those liquids which do not adhere to glass, do not rise in capillary tubes; but on the contrary, stand lower within than without. The phenomena of the rise of liquids in such tubes, is called *capillary attraction*, and is exhibited in numberless instances in nature, as in the rising of the sap in vegetables.—2. In bot., *capillary* plants are hair-shaped, as the ferns; a term used by Ray, Boerhaave, and Morison. This class of plants corresponds to the order of Filices, in the sexual method, which bear their flower and fruit on the back of the leaf or stalk. ## CARBONIC

**CARAWAY**, *n.* [Gr. *καριον*, *καριον*: Lat. *caros*, *carum*; Fr. *carvi*; Ar. *kara-waia*.] A plant of the genus *Carum*, the *Carum Carui*, a biennial plant, with a taper root like a parsnip, which, when young, is good eating. The seeds, which are properly the fruit, have an aromatic smell, and a warm pungent taste. They are used in cakes, incrustated with sugar, and distilled with spirituous liquors.

**CARBAZOTIC ACID**, *n.* A crystallizable acid and bitter substance, composed of carbon, azote, and oxygen, obtained by the action of nitric acid on indigo, and some other animal and vegetable substances. It is the bitter principle of Welter.

**CARBON**, *n.* [Lat. *carbo*, a coal; Sp. *carbon*; Fr. *charbon*. Qu. Gr. *καρβον*, to dry, or the root of *char*, Russ. *charyu*, to burn.] Pure charcoal; a simple body, black, brittle, light, and inodorous. It is usually the remains of some vegetable body, from which all its volatile matter has been expelled by heat; but it may be obtained from most organic matters, animal as well as vegetable, by ignition in close vessels. When crystallized, it forms the diamond. Wood carbon, or charcoal well prepared, is of a deep black colour, brittle and porous, tasteless and inodorous. It is infusible in any heat a furnace can raise, but by the action of a powerful galvanic apparatus, it may be volatilized, presenting a surface with a distinct appearance of having undergone fusion. When thoroughly burned, it is a conductor of electricity, but a very bad conductor of heat. It has the property of absorbing different gases, and gives them out again when heated. It has a powerful affinity for oxygen, and decomposes several of the acids, depriving them of their oxygen. It is used sometimes as fuel, on account of its giving a strong and steady heat without smoke. It is employed to convert iron into steel by cementation. It enters into the composition of gunpowder. It forms the basis of black paints, Indian ink, and printer's ink. It enters into combination with various substances.

several pairs of feet, and have the shape and appearance of a worm. **CAT'TLF**, *n. sing. or plur.* [Norm. *catal*, *chattel*, and *chatters*, goods, commodities, moveables; Arm. *chetal*, beasts; Port. *gado*. In Syr. and Ch. *ra*, *gat*, and *ra*, *get*, signify a flock, herd, possession, goods. But Spelman alleges that the word *chattel* is contracted from *capitalia*, *capital* from *caput*, a word used in the middle ages for all goods, moveable and immovable, answering nearly to the use of Gr. *κταται*, Acts xxii. 28, *καλλου κταται*, "with a great price or sum I obtained this freedom." Qu. Sp. *caudal*, wealth, property, capital sum. *Cattle* may be from the root of It. *cattare*, to got, and denote possessions.] 1. Beasts or quadrupeds in general, serving for tillage or other labour, and for food to man. In its primary sense, the word includes camels, horses, asses, all the varieties of domesticated horned beasts or the bovine genus, sheep of all kinds and goats, and perhaps swine. In this general sense it is constantly used in the scriptures; see Job i. 3. Hence it would appear that the word properly signifies possessions, goods. But whether from a word originally signifying a beast, for in early ages beasts constituted the chief part of a man's property, or from a root signifying to get or possess, Gr. *κτημαι*, It. *cattare*, or from *capitalia*, it is not easy to determine. This word is restricted to domestic beasts; but in England it includes horses.—2. In the *United States*, cattle, in common usage, signifies only beasts of the bovine genus, oxen, bulls, cows and their young. In the laws respecting domestic beasts, horses, sheep, asses, mules and swine are distinguished from *cattle*, or neat cattle. Thus the law in Connecticut, requiring "that all the owners of any cattle, sheep, or swine, shall ear-mark or brand all their cattle, sheep and swine," does not extend to horses. Yet it is probable that a law, giving damages for a trespass committed by cattle breaking into an inclosure, would be adjudged to include horses. In *Great Britain*, beasts are distinguished into *black cattle*, including bulls, oxen, cows and their young; and *small cattle*, including sheep of all kinds and goats.—3. In reproach, human beings are called cattle.

The name *caucus* originated in a dispute which occurred at Boston, in *New England*, a short time previous to the revolution, between a party of English soldiers and the caulkers of the town, in consequence of which, some of the citizens were killed by the soldiers. This led to meetings on the part of the inhabitants, to concert measures for obtaining redress, and these meetings were by the soldiers called *caulkers' meetings*, which expression was soon corrupted into *caucus meetings*.

The primary sense is to urge, press, impel, like *sequor*, whence *suit*; hence, to *accuse*, to attack or follow with a charge. The root of this word coincides with that of *castle*, *cast*, &c., which express a driving. A cause is that which moves, excites, or impels to action or effect; in *law*, a pressing for a claim. See *QUESTION*. *Cause*, *suite*, and *thing* have the like radical sense.] 1. A suit or action in court; any legal process which a party institutes to obtain his demand, or by which he seeks his right or his supposed right. This is a legal, scriptural, and popular use of the word, coinciding nearly with *case* from *cado*, and *action* from *ago*, to urge or drive.

The cause of both parties shall come before the judges; Ex. xxi.

2. That which produces an effect; that which impels into existence, or by its agency or operation produces what did not before exist; that by virtue of which any thing is done; that from which any thing proceeds, and without which it would not exist.

Cause is a substance exerting its power into act, to make a thing begin to be. Locke.

Causes are distinguished into—*Efficient cause*, the only true and proper cause of any thing, in distinction from a *secondary cause*, or that which is subservient to another cause. In this sense

God is the only efficient cause, or the *first cause*, to which all other causes are secondary.—*Necessary cause*, that which is concerned in producing an effect, not by the will of any agent, but by a necessary law of nature, as the sun emits its rays, or a spring its waters. This may be otherwise termed a *natural cause*.—*Accidental cause*, that which produces effects incidentally; as, for the sun to kill any person by the force of its rays.—*Final cause*, that which is the direct end or motive for an action, &c.—*Secondary cause*, that which is subservient to the final cause; secondary causes are the means employed for bringing about the final cause. The final cause of the universe is the end which the Almighty had in view in framing it. The final cause of the eye is to produce vision; the secondary causes are to be sought for in the structure of the eye, and the laws of optics. All the phenomena of nature may be considered as secondary causes, when contemplated in relation to the plans of Providence.—*Cause and effect*, in *meta.*, a principle of association. According to this principle, things and thoughts, by appearing together, or by being frequently joined together, become so closely related in the mind, that the one has always a tendency to suggest the other. This is one of the principles which regulate the train of thought in the mind of the philosopher, when he is engaged in a particular investigation.—3. The reason or motive that urges, moves, or impels the mind to act or decide.

For this cause have I raised up Pharaoh, Ex. ix.

And David said, Is there not a cause? 1 Sam. xvii.

4. Sake; account.

I did it not for his cause that had done the wrong; 2 Cor. vii. [See *SAKE*.]

5. That which a party or nation pursues; or rather pursuit, prosecution of an object. We say, Bible Societies are engaged in a noble cause. [See the first definition.] Hence the word *cause* is used to denote that which a person or thing favours; that to which the efforts of an intelligent being are directed; as, to promote religion is to advance the cause of God. So we say, the cause of truth or of justice. In all its applications, *cause* retains something of its original meaning, struggle, impelling force, contest, effort to obtain or to effect something.—6. *Without cause*, without good reason; without a reason or motive to justify the act.

They hate me without cause; Ps. xxxv. lix.

CAUSE, v. t. To produce; to bring into existence.

They caused great joy to all the brethren; Acts xv.

The Spanish has *calzada*, a causey, or way paved and raised; Port. *calçada*, a pavement, and stones used in paving. Both these words are evidently from the same root as Sp. *calzas*, Port. *calçado*, Sp. *calzado*, hose, loose breeches, trousers, shoes, Fr. *chausser*, and the French word is evidently the same with the loss of *l*. The sense is probably taken from putting on, covering, Port. *calçar*, to put on shoes or stockings, to pave, Sp. *calzar*, id., Lat. *calceo*, *calceus*.] A way raised above the natural level of the ground, by stones, earth, timber, fascines, &c., serving as a dry passage over wet or marshy ground, or as a mole to confine water to a pond, or restrain it from overflowing lower ground. **CHARACTERED**, *pp.* Engraved; inscribed; distinguished by a particular character.

**CHARACTERISM**, *n.* The distinction of character. —2. A particular aspect or configuration of the heavens.

**CHARACTERISTIC**, *a.* [Gr. *χαρακτηριστικός*, from *χαρακτίζω*.] That constitutes the character; that marks the peculiar distinctive qualities of a person or thing; as, generosity is often a *characteristic* virtue of a brave man. It is followed by *of*; as, generosity is *characteristic* of true bravery.

**CHARACTERISTIC**, *n.* That which constitutes a character; that which characterizes; that which distinguishes a person or thing from another.

*Invention is the characteristic of Homer.* *Pope.*

2. In *gram.*, the principal letter of a word, which is preserved in most of its tenses, in its derivatives and compounds. —The *characteristic* of a log-

**CHARADE**, *n.* [Said to be from the name of the inventor.] A composition in which the subject is generally a word of two syllables, each forming a distinct word; and these syllables are to be concealed in an enigmatical description, first separately and then together. Example:

*My first*, when a Frenchman is learning English, craves him to swear by. *My second*, is either hay or corn. *My whole* is the delight of the age. *Gurark.*

It does not seem to be necessary that the word should consist only of two syllables. To have any thing of wit or point, a charade should be so contrived that the ideas employed to denote or suggest the several syllables, and the entire word, shall be all in some way connected together, or arise naturally the one out of the other. This however is often neglected.

**CHARADREUS**, *n.* The plover; a genus of birds belonging to the order Grallæ, the characters of which are, three toes on each foot, the point of the bill cylindrical and obtuse, and the nostrils linear. There are several species, one of which is common in the moors of Scotland; it is easily known by its shrill whistling sound. [See *POLOVER*.]

**CHARCOAL**, *n.* [*char* and *coal*. See *CHAR*.] Coal made by charring wood; the impure carbon obtained by the decomposition of vegetable matter by heat, without free access of air. During this operation the watery and more volatile elements of the woody fibre are expelled, while the carbon remains, mixed however with some saline mat-

ter. [See *CARBON*.] Charcoal forms one of the ingredients in the composition of gunpowder. It makes a strong heat, and is used in furnaces, forges, private families, &c. It is black, brittle, light, and inodorous, and not being decomposable by water or air, will endure for ages without alteration. —*Animal charcoal*, charcoal obtained by the decomposition of the carbonaceous portion of bones. It possesses, in a much higher degree than vegetable charcoal, the power of destroying vegetable colours.

**CHARD**, *n.* [Fr. *chard*; Lat. *carduus*.] The leaves of artichokes tied and wrapped all over, except the top, in straw, during autumn and winter. This makes them grow white, and lose some of their bitterness. —*Chards of beet*, are plants of white beet transplanted, producing great tops, which, in the midst, have a large, white, thick, downy, cotton-like main shoot, which is the true chard.

**CHARGE**, *v. t.* (*charj*). [Fr. *charger*.] It would seem from the Welsh, that this word is from *car*, a cart or other vehicle, and that the noun *charge* or *cargu* was first formed, and therefore ought in arrangement to precede the verb. If the verb was first formed, the primary sense would be to load, to throw or put on or in. I think the fact to be otherwise. See *CARGO*.] 1. To rush on; to fall on; to attack, especially with fixed bayonets; as, an army *charges* the enemy. —2. To load, as a musket or cannon; to thrust in powder, or powder and ball, or shot. —3. To set to, as a debt; to place on the debit side of an account; as, to *charge* a man with the price of goods sold to him. —10. To load or lay on in words, something wrong, reproachful, or criminal; to impute to; as, to *charge* a man with theft. —11. To lay on in words; to impute to; followed by *on* before the person; as, to *charge* a crime on the offender; to *charge* evil consequences on the doctrines of the Stoics. —12. To censure; to accuse.

In this sense, when the command is given in the name of God, or with an oath, the phrase amounts to an adjuration. —To adjure; to bind by an oath. —14. To give directions to; to instruct authoritatively; as, the judge *charged* the grand jury to inquire respecting

## CHARGE

breeches of the peace.—15. To communicate electrical matter to; as, to a coated vial, or an electrical battery.

**CHARGE**, *v. t.* To make an onset. Thus Glanville says, "like your heroes of antiquity, he *charges* in iron;" and we say, to *charge* with fixed bayonets. But in this application, the object is understood; to *charge* the enemy.

**CHARGE**, *n.* [Fr. *charge*; Arm. and W. *carg*; Eng. *cargo*.] 1. That which is laid on or in; in a *general sense*, any load or burden. It is the same word radically as *cargo*.—2. The quantity of powder, or of powder and ball or shot, used to load a musket, cannon, or other like instrument.—3. Hence, 5. That which is enjoined, committed, intrusted, or delivered to another, implying care, custody, oversight, or duty to be performed by the person intrusted.

I gave Hannani *charge* over Jerusalem; Neh. vii.

Hence the word includes any trust or commission; an office, duty, employment. It is followed by *of* or *over*; more generally by *as*. Hence, 6. The person or thing committed to another's custody, care, or management; a trust. Thus the people of a parish are called the minister's *charge*.

The word may be used as synonymous with command, direction, exhortation, or injunction, but always implies solemnity.—In the technical language of *Scots law*, a *charge* is the command of the king's letters to perform some act, as to enter heir. The term is also applied to the messenger's copy of service requiring the person to obey the order of the king's letters; as, a *charge* on letters of horning, or a *charge* against a superior.—8. Imputation in a bad sense; accusation.

In *her.*, that which is borne upon the colour; or the figures represented on the escutcheon, by which the bearers are distinguished from one another.—16. In *electrical experiments*, a quantity of electrical fluid, communicated to a coated jar, vial, or pane of glass.—17. ## CHEMIC

**CHEMIE**, or **CHEMICAL**, *a.* [See **CHEMISTRY**.] Pertaining to chemistry; as, a *chemical* operation.—2. Resulting from the operation of the principles of bodies by decomposition, combination, &c.; as, *chemical* changes.—3. According to the principles of chemistry; as, a *chemical* combination.—*Chemical Attraction*, *Chemical Affinity*, and *Electric Attraction*, are different names for that unaccounted-for action by which the particles of one class of bodies, when presented to those of certain other classes, conjoin to form new compounds, making apparently a choice or election of those with which they unite. Chemical attraction, like cohesion, acts only at insensible distances; that is, before substances can be united by chemical attraction, their particles must be brought into immediate contact. It thus differs entirely from the attraction of gravitation. It is distinguished from cohesion by being exerted between dissimilar particles only, while cohesion unites similar particles only. It is also accompanied by a change of properties, the combining substances losing their own properties, and the product of their combination acquiring new ones; whereas in cohesion no such change takes place. The chemical properties of bodies are owing to affinity, and every chemical phenomenon is produced by the operation of this principle. It extends its influence over all substances, yet it affects them in very different degrees, and is subject to peculiar modifications. Of three bodies, A, B, and C, it is often found that B and C have no affinity for each other, and therefore do not combine; that A, on the contrary, has an affinity for B and C, and can enter into separate combination with each of them; but that A has a greater attraction for C than for B, so that if we bring C in contact with a compound of A and B, A will quit B and unite by preference with C. When a substance thus manifests, as it were, a choice for one of two others, uniting with it by preference, and to the exclusion of the other, it furnishes an example of what is termed *Single Elective Affinity*.—*Double Elective Affinity*, takes place when two substances, each consisting of two principles, are presented to each other, and mutually exchange a principle of each, by which means two new bodies or compounds are produced of a different nature from the original compounds.—*Chemical Equivalents*. [See **EQUIVALENT**.]—*Chemical Analysis*, a term applied to the resolution of compound bodies into their elements. It is either *qualitative* or *quantitative*. *Qualitative Analysis*, consists in the determination of the component parts, merely as respects their nature, and without regard to their relative proportions. *Quantitative Analysis*, consists in the determination not merely of the components of a compound, but their relative proportions.—*Chemical Formula*, symbolic expressions employed to denote the composition of bodies. In the formula now generally adopted by chemists, the names of elementary substances are indicated by the first letter or letters of their names, and to express the compounds of these the letters are connected together algebraically, while the equivalents are marked by numbers. Thus H O ex-

presses water, and indicates that it is composed of hydrogen and oxygen. Potash, which is a compound of potassium (kalium) and oxygen, is expressed by K O. S O<sub>2</sub> represents sulphuric acid, and indicates that this acid is formed by the union of one equivalent of sulphur, and three of oxygen. H O, S O<sub>2</sub>, represents sulphate of potash. K O, S O<sub>2</sub> + H O, S O<sub>2</sub>, represents bisulphate of potash.—*Chemical Combination*, that intimate union of two substances, whether fluid or solid, which forms a compound, differing in one or more of its essential qualities from either of the constituent bodies.—*Chemical Decomposition*, the separation of the component parts or principles of bodies from each other, or the resolution of compounds into their elements. [See **DECOMPOSITION**.]

**CHEMISTRY**, *n.* [*Fr. chimie*; *Sp. chimia*; *It. and Port. chimica*. It is the Arabic *kimia*, the occult art or science, from *kami*, to conceal. This was originally the art or science now called Alchemy; the art of converting baser metals into gold. The order of Diocletian, directing search to be made for books treating of the wonderful art of making gold and silver, and all that should be found to be committed to the flames, proves the origin of this art to be as remote as the close of the third century, and it was probably somewhat earlier. It is not improbable that this art was used in counterfeiting coins. The common orthography is from *χμ*, to melt or fuse; the old orthography, *chymistry*, was from *χυμ*, the same word differently written.] Chemistry is a science, the objects of which are to investigate the nature and properties of the elements of matter, and their mutual actions and combinations; to ascertain the proportions in which they unite, and the modes of separating them when united; and to inquire into the laws and powers which preside over and affect these agencies. As an art, chemistry may be traced to a very remote period; but it can scarcely be said to have existed as a science previous to the commencement of the seventeenth century. The basis of chemical science is induction from experiment. It employs two methods for ascertaining the internal structure of bodies, *analysis* and *synthesis*, or decomposition and combination. There is no science more extensive than chemistry, nor is it possible for one person to embrace it in its whole extent. The objects, however, of this science may be all included under one or other of the following heads: 1. The general powers and properties of matter. 2. The chemistry of elementary substances. 3. The chemistry of compounds. Under the first head we include *attraction* and *affinity*, heat, light, and electricity; under the second head are included the chemical history and properties of

the ponderable *elementary substances* (fifty-four in number), and their mutual *reactions*. This leads on to the third head, namely, to the chemical history and properties of *compound bodies*.—*Philosophical or Theoretical Chemistry*, investigates the chemical relations of bodies, and the laws by which the combination and decomposition of their parts are effected, without regard to extraneous consideration. Chemistry viewed as a science having certain objects in common with others, as with mineralogy, medicine, physiology, and the arts, is termed *Applied Chemistry*.—*Inorganic Chemistry*, that branch which treats of the properties of inorganic substances, as minerals, metals, salts, waters, gases. It includes the doctrine of affinity and the laws of combination. — *Organic Chemistry*, that branch which treats of the composition and properties of organized substances, both animal and vegetable. It may be subdivided into *animal and vegetable chemistry*, and is a branch of extreme interest and importance. — *Agricultural Chemistry*, treats of the nature of plants and soils, their constituent elements, the laws of production, and the art of culture; the rotation of crops, and the different kinds of manure. — *Physiological Chemistry*, considers the changes produced in animal substances by the operation of life. — *Electro-Chemistry*, that branch of chemical science which describes the especial applications of electricity as a chemical agent. Chemistry is subservient to the various arts of life, and the several branches of manufacture which are carried on in every civilized state. Dyeing, bleaching, tanning, glass-making, the working and composition of metals, &c., are all processes of chemistry. In *agricultural chemistry* investigates the nature of soils; it explains the phenomena of the growth and nourishment of vegetables, and the nature and action of manures. As a science it is connected with all the phenomena of nature, the causes of rain, snow, hail, dew, wind, and earthquakes. It has been called in to the aid of the culinary arts; and its high importance in medicine has been long and universally acknowledged. The most potent agents employed in chemical operations are light, heat, and electricity.

The fruit is a pulp inclosing a kernel. It is related that this fruit was brought from *Cerasus* in Pontus to Italy, after the defeat of Mithridates by Lucullus, A.U. 680, and introduced into England by the Romans, about 120 years afterward, A.D. 55.—*Barbadoes cherry*, is the genus *Malpighia*, of several species. It is usually amorphous, sometimes globular, or in nodules. It occurs often in veins, especially metallic, in primitive mountains. Chert is also applied to other minerals besides hornstone. Aikin calls a variety of flint, *flinty chert*, and the Derbyshire miners apply the term *black chert*, to a fusible mineral, whereas the hornstone above described is infusible.

**CHERTY**, *a.* Like chert; flinty.

**CHERTY**, *n. plur.* *Cherubs*, but the Hebrew plural *Cherubim* is also used, and sometimes the plural is written with an *n*. *Cherubims* as a plural is improper. [Heb. כְּרֻבִּים *kerub*. In Ch. and Syr. the corresponding verb signifies to plough; and the word is said to signify properly any image or figure; if so, it may have been named from engraving. But this is uncertain, and the learned are not agreed on the signification.] A figure composed of various creatures, as a man, an ox, an eagle, or a lion. The first mention of cherubs is in Gen. iii. 24, where the figure is not described, but their office was, with a flaming sword, to keep or guard the way of the tree of life. The two cherubs which Moses was commanded to make at the ends of the mercy seat, were to be of beaten work of gold; and their wings were to extend over the mercy seat, their faces toward each other, and between them was the residence of the Deity; Ex. xxv. The cherubs, in Ezekiel's vision, had each four heads or faces, the hands of a man, and wings. The four faces were the face of a bull, that of a man, that of a lion, and that of an eagle. They had the likeness of a man; Ezek. iv. and x. In 2 Sam. xvii. 11, and Psalm

**CHESSE,** *n.* In New England, the Bromus Secalinus, a grass which grows among wheat, and is supposed to be wheat degenerated or changed, as it abounds most in fields where the wheat is winter-killed. It bears some resemblance to oats. This fact is mentioned by Pliny, Nat. Hist. lib. 18, ca. 17. "Primum omnium frumenti vitium avena est; et hordeum in eam degenerat." This change of wheat and barley into oats, he ascribes to a moist soil, wet weather, bad seed, &c. This opinion coincides with observations in America, as wheat is most liable to perish in moist land, and often in such places almost all the wheat is killed, and instead of it chess often appears. But this change of wheat into chess is now denied, and the common opinion is affirmed by the ablest botanists to be erroneous.

It forms pale, yellow, pearly scales. By dissolving it in caustic potash, *Chloranilic acid* is formed. **CHLORANTHACEÆ**, *n.* A nat. order of Aclanaydnous exogens, allied to the peppers, and like them having an aromatic fragrant odour; they are found in tropical regions. *Chloranthus officinalis* is reckoned a stimulant of the highest order.

**CHLO'RATE**, *n.* [See CHLORINE.] A compound of chloric acid with a salifiable base. The chlorates are very analogous to the nitrates. They are decomposed by a red heat, nearly all of them being converted into metallic chlorides, with evolution of pure oxygen gas. They deflagrate with inflammable substances with such facility, that an explosion is produced by slight causes. The chlorates of soda and potash are used in medicine.

**CHLO'RIC**, *a.* Pertaining to chlorine, or obtained from it.—*Chloric acid*, an acid composed of chlorine and oxygen. It combines with the bases and forms the chlorates.—*Chloric acid* is that acid of chlorine and oxygen, which contains the greatest proportion of the oxygen.

The chlorides of potash, soda, and lime, are the most important preparations through which chlorine exercises its peculiar powers upon the objects of manufactures, as in the processes of bleaching and calico printing. Common salt is a *chloride* of sodium; that is, a binary compound of chlorine and sodium. When there are two chlorides of the same base, the relative proportions of chlorine in them are almost invariably as 1 to 2; hence, the terms *protochloride*, and *bichloride*. Chlorides are also termed *chlorurets*.

## CHLOROMETER

denominated from its colour, *chlorine*, or chloric gas. It exists only in combination. It composes about sixty per cent. of common salt. It has a peculiar smell, and irritates the nostrils most violently when inhaled, as also the windpipe and lungs. It is eminently noxious to animal life; it supports the combustion of many bodies, and indeed spontaneously burns several. The resulting combinations are called chlorides, which act most important parts in many manufacturing processes. Chlorine is one of the most powerful bleaching agents, but it requires to be tempered by the quiescent affinity of some alkaline base, as potash or lime. Malaria, or morbilli, and putrescent miasmata, are best counteracted by chlorine where it can be conveniently applied.

It is most prevalent at the end of summer or the beginning of autumn.—*Cholera morbus* is a disease, in many respects one of the most remarkable that has ever afflicted the human race. It is decidedly of modern origin, having originated at Jessore, in the year 1817. The disease, in its more ordinary form, commences with sickness, vomiting, or perhaps two or three loose evacuations of the bowels; after which, follow a sense of burning at the præcordia, an increased purging and vomiting of a white or colourless fluid, great prostration of strength, spasms at the extremities which increase in violence with the vomiting and purging. A house consecrated to the worship of God, among Christians; the Lord's house. This seems to be the original meaning of the word. The Greek *εκκλησία*, from *εκκαλεω*, to call out or call together, denotes an assembly or collection. But *κυριακή*, *κυριακή*, are from *κυριος*, Lord, a term applied by the early Christians to Jesus Christ; and the house in which they worshipped was named from that title. So *κυριακή* signifies church goods, bona ecclesiastica; *κυριακή*, Sc. *kirke*, the Lord's day, dies dominica. Churches are of five classes; metropolitan, cathedral, collegiate, conventual, and parish churches. [See *these terms*.]—2. An intertexture of letters, as the initials of a name, engraved on a seal, box, plate, coach, or tomb; a device; an enigmatical character. A secret or disguised manner of writing; certain characters arbitrarily invented and agreed on by two or more persons, to stand for letters or words, and understood only by the persons who invent, or agree to use them. This is a mode of communicating information by letters, in time of war, with a view to conceal facts from an enemy, in case the letters should be intercepted. This art has given rise to another art, that of *deciphering*; and hence *cipher* is used for a key to unravel the characters. To *have*, or to *learn a cipher*, is to be able to interpret it.

**CLÉAVAGE, n.** The act of cleaving or splitting. —2. In *miners*, the manner of cleaving or of mechanical divisions. It is used in relation to the fracture of minerals which have natural joints and possess a regular structure. Certain rocks, usually called slate rocks, may be cleaved into an indefinite number of thin laminae which are parallel to each other, but which are generally not parallel to the planes of the true strata, or layers of deposition, so that the planes of cleavage are distinguishable from those of stratifications; they also differ from joints, which are fissures or lines of parting at definite distances, and often at right angles to the planes of stratification. The partings which divide columnar basalt into prisms, are joints. The mechanical division of crystals, by showing the direction in which their laminae can separate, enables us to determine the mutual inclination of these laminae. In the interior of many minerals, the direction of the cleavage may frequently be seen, without using any mechanical violence.

Clepsydra

the Greeks and Romans, which measured time by the discharge of a certain quantity of water. There were many kinds of clepsydræ or water-clocks among the ancients, but they all had this in common, that the water ran generally through an orifice or narrow passage from one vessel into another in the manner of a sand-glass; and in the lower was a piece of cork or light wood, which, as the vessel filled, rose up by degrees and showed the hour. These instruments had three great defects; the first was that the water ran out with greater or less facility, as the air was more or less dense; the second, that the flow increased by an increase of temperature; and the third, that the water flowed more quickly at the beginning than towards the conclusion. Clepsydræ no doubt suggested the use of *sand-glasses*, the principle being the same in both; neither having the accu-

racy of our modern time-pieces. — 2. A chemical vessel.

In 1 Pet. v. 3, the word in the plural seems to signify the church or body of believers; it is rendered God's heritage. In W. *cler* signifies teachers or learned men of the druidical order; *clergy*, belonging to the *cler*, clerical. It. Sp. *clero*, from the Latin. The application of this word to ministers or ecclesiastical teachers seems to have originated in their possessions, or separate allotments of land; or from the Old Testament denomination of the priests, for the tribe of Levi is there called the lot, heritage, or inheritance of the Lord.] 1. The body of men set apart and consecrated, by due ordination, to the service of God, in the Christian church; the body of ecclesiastics, in distinction from the laity. — 2. *Bought of clergy*, in English law, originally the exemption of the persons of clergyman from criminal process before a secular judge; or a privilege by which a clerk, or person in orders, claimed to be delivered to his ordinary to purge himself of felony. This anomalous privilege, first assumed to give immunity to priestly persons, was in the sequel extended to lettered laymen, in many cases. First legally recognised by Stat. 3 Edw. 1. A. D. 1271; modified in 1533, temp. Hen. 8; it was wholly repealed by 7 and 8 Geo. 4, June 1827.

*lookie*, convenient, dexterous, *ulovka*, dexterity, craft, *loniya*, to take or seize, as if allied to Gothic *lofa*, Ir. *lamb*, W. *llaw*, the hand. In Ir. *lub* is a thong or loop, a plait or fold, and craft, cunning; *lubach*, sly, crafty; *lubam*, to bend. In Eth. *labawi* signifies ingenious, ready, skilful, and the verb, to understand, or be skilful. If *v* in *clever* is from *g*, as in many other words, the affinities may be Sax. *gleaw*, knowing, skilful, industrious, wise, which is the Ger. *klay*. Yet much doubt remains.] 1. In *geog.*, a part of the surface of the earth bounded by two circles parallel to the equator, and of such a breadth that the longest day in the parallel nearest the pole is half an hour longer than that nearest to the equator. The beginning of a climate is a parallel circle in which the longest day is half an hour shorter than that at the end. The climates begin at the equator, where the day is twelve hours long; and at the end of the first climate, the longest day is twelve and a half hours long, and this increase of half an hour constitutes a climate, to the polar circles; from which climates are measured by the increase of a month.—2. In a *popular sense*, a tract of land, region, or country, differing from another in the temperature of the air; or any region or country with respect to the temperature of the air, the seasons, and their peculiar qualities, without any regard to the length of the days, or to geographical position. Thus we say, a warm or cold *climate*; a moist or dry *climate*; a happy *climate*; a genial *climate*; a mountainous *climate*.—In general, however, geographical latitude is the principal circumstance to be taken into view, in considering the climate of a country with regard to temperature. The highest degree of heat is found under the equator, and the lowest, or greatest degree of cold, under the poles. But the climate of any place is affected by various causes; as, elevation above the level of the sea, insular or continental position, presence or absence of mountains, forests, rivers, lakes, marshes, &c. There are other causes which, no doubt, have their influence on climate; such as electricity, subterranean fire, peculiar states of the earth's surface, which may be supposed to obtain in volcanic regions; and various astronomical causes.

The word clout, a nail, may be from the French, clou, clouter, from Lat. clavus, from the root of Lat. claudo, cludo. Whether clouted brogues in Shakespeare signify patched shoes or shoes studded with nails, let the critic determine. Such shoes are common in England and Scotland. The primary sense is, to thrust or put on; hence the sense of blow.] 1. A patch; a piece of cloth or leather, &c., to close a breach.—2. A piece of cloth for mean purposes.—3.† A piece of white cloth for archers to shoot at.—4. An iron plate on an axle-tree, to keep it from wearing.—5. [Fr. clou, clouter.] A small nail.—Clout-nails, nails that are used to fasten on the clout to the axle-trees of carriages.—6. In vulgar lan., a blow with the hand.

**CLOUT**, *v. t.* To patch; to mend by sewing on a piece or patch; as, clouted shoon, in Milton. This is the sense as understood by Johnson. Mason understands the word clouted to signify nailed, studded with small nails, from the French clouter, and the following words in Shakespeare, "whose rudeness answered my steps too loud," give some countenance to Mason's interpretation. In this case, the verb clout must signify to nail, or fasten with nails; to stud.—2. To cover with a piece of cloth.—3. To join clumsily; as, clouted sentences.—4. To cover or arm with an iron plate.—5. To strike; to give a blow. [Vulgar.]—Clouted cream, yet made in Devonshire &c. was probably a rustic name for clotted cream.

**CLOUT'ERLY**, *a.* Clumsy; awkward.

**CLOUTING**, *ppr.* Patching; covering with a clout.

# CLOVE-GRASS

A cleft; a fissure; a gap; a ravine. This word, though properly an appellative, is not often used as such, in English; but it is appropriated to particular places, that are real clefts, or which appear as such; as, the Cleave of Kaaterskill, in the state of New York, and the Stony Cleave. It is properly a Dutch word.

**CLOVE**, *n.* [Sax. clufe; Fr. clou; Sp. clavo; from Lat. clavus, a nail; so called from its resemblance to a nail.] 1. The tree grows to the size of the laurel, and its bark resembles that

of the olive. No verdure is seen under it. At the extremities of its branches are produced vast numbers of flowers, which are at first white, then green, and at last red and hard. It is the least volatile of the essential oils, and consists of Caryophyllie acid and a neutral oil.—2. [from cleave.] The parts into which garlic separates, when the outer skin is removed.—3. A certain weight. The divisions of a weight or woy of cheese, &c. in Suffolk and Essex, are expressed in cloves; in the former of which 32 cloves (266 pounds) are a woy, in the latter, 42 cloves (330 pounds). A woy of wool divides into 26 cloves.

**CLOVE-GILLY-FLOWER**, *n.* A species of Dianthus, bearing a beautiful flower, cultivated in gardens; called also Carnation pink. *Notes.* Some writers suppose that gilly-flower should be written *July-flower*. But qu. is it not a corruption of the French giraffe, clou de giraffe, cloves; giraffée, a gillflower; giraffier, a stook gillflower; Lat. caryophyllus. Chancer wrote cloue gilofre. Cant. Tales, 13692. The Italians write garafano, probably for garafalo; Arm. genafien, genafien. Johnson supposes the plant so called from the smell of the flower resembling that of cloves; but it is probably from its shape, the nail-flower. [See CLOVE.]

Properly, a stick or piece of wood, with one end thicker and heavier than the other, and no larger than can be wielded with the hand.—2. Hence the share of each individual in joint expenditure is called his *club*, that is, his proportion of a club, or joint charge.—6. Contribution; joint charge.—*Club-system*. The system of selling goods, to be paid by periodical instalments. In such cases, the purchaser pays a higher price than that at which the goods are usually sold, in order to indemnify the seller for the interest of money due upon the deferred payments, and for the extra risk he runs of bad debts from death, &c.—*Club of Hercules*. The story of Hercules with his club originated in the use of clubs, as weapons of war and other achievements, among rude nations, before the invention of other instruments and the use of iron. Hence *striking*, *beating*, was the first mode of *killing*; and hence *smile* and *glay*, properly signifying to *strike*, came to signify to *kill*. Hercules was the leader of a savage band, who wielded the heaviest club; and hence the club was the origin of the *sceptre*, which is in the shape of a club, coinciding with Latin *scipio*. Any bold warrior at the head of a predatory band was a *Hercules*.

It is divided by recent mineralogists into three species, anthracite or glance coal, black or bituminous coal, and brown coal or lignite; under which are included many varieties, such as cannel coal, Bovey coal, jet, &c. The several varieties of coal vary in their composition, but they generally agree in containing a much larger proportion of carbon than of the other elements, which are chiefly oxygen and hydrogen, and frequently a small portion of azote. Coal is the most valuable of all the mineral substances from which Great Britain derives her prosperity, and indeed may be regarded as the main support of the whole system of British production. It fuses the metals, produces the steam which sets the machinery in motion, and, in short, may be said to render all the resources of this country available for use. The annual consumption of coal throughout the British empire is estimated at 28,575,000 tons. The coal trade gives occupation to nearly 200,000 persons.

**COHESION**, *n.* (*s* as *z*). [*Fr. cohesione*; from *Lat. cohaeri*, prot. of *cohaere*.]

1. The act of sticking together; the state of being united by natural attraction, as the constituent particles of bodies which unite in a mass, by a natural tendency; one of the different species of attraction. It acts at insensible distances, or when the particles of matter which it unites are placed in contact; and is thus distinguished from the attraction of gravitation, which acts on masses of matter, and at all sensible distances. It unites the particles of the same kind of matter, without producing any change of properties; and is thus distinguished from *adhesion*, which takes place between the particles of different substances, as between fluids and solids; and from *chemical attraction*, or *affinity*, which unites the particles of different substances together, and changes their properties. The great use of cohesion is to preserve the forms of bodies; as, without its agency, all substances would be in the form of small dust. The power of cohesion in different bodies is estimated by the force necessary to pull them asunder. In general, cohesion is most powerful among the particles of solid bodies, weaker among those of fluids, and least of all, or almost entirely wanting, in elastic fluids, as air and gases. Hardness, softness, tenacity, elasticity, malleability, and ductility, are to be considered as modifications of cohesion. The great antagonist of cohesion is *heat*. — 2. [See CHALCITE.]COLD, *a.* [Sax. *cald*; Ger. *kalt*; Sw. *kall*; Dan. *kold*; and the noun *kulde*. The latter seems to be connected with *kul*, a coal, and *kuler*, to blow strong. But the connection may be casual. In Swedish, *kyla* signifies to cool, and to burn; thus connecting *cool*, *cold*, with the Lat. *calco*, to be hot. Both cold and heat may be from rushing, raging, and this word may be from the same root as *gale*. If not, cool would seem to be allied to Lat. *gelo*.] 1. Also, the cause of that sensation. Heat expands the vessels, and cold contracts them; and the transition from an expanded to a contracted state is accompanied with a sensation to which, as well as to the cause of it, we give the denomination of *cold*. Hence *cold* is a privation of heat, or the cause of it. 2. A shivering; the effect of the contraction of the fine vessels of the body; chilliness or chilliness. - 3. member or limb.] 1. In *anat.*, the largest of the intestines, or rather the largest division of the intestinal canal; beginning at the caecum, and ascending by the right kidney, it passes under the hollow part of the liver, and the bottom of the stomach, to the spleen; thence descending by the left kidney, it passes in the form of an S to the upper part of the os sacrum, where, from its straight course, the canal takes the name of rectum.—2. In *gram.*, a point or character formed thus [ : ], used to mark a pause greater than that of a semicolon, but less than that of a period; or rather it is used when the sense of the division of a period is complete, so as to admit a full point; but something is added by way of illustration, or the description is continued by an additional remark, without a necessary dependence on the foregoing members of the sentence. Thus,

A brute arrives at a point of perfection he can never pass: in a few years he has all the endowments he is capable of. *Spect.* No. iii.

The colon is often used before an address, quotation, or example. "Mr. Grey was followed by Mr. Erskine, who spoke thus: 'I rise to second the motion of my honourable friend.'" But the propriety of this depends on the pause, and this depends on the form of introducing the quotation; for, after *say*, *said*, or a like word, the colon is not used, and seems to be improper. Thus, in our version of the Scriptures, such members are almost invariably followed by a comma. "But Jesus said to them, 'Ye know not what ye ask.'" The use of the colon is not uniform; nor is it easily defined and reduced to rules. Indeed, the use of it might be dispensed with without much inconvenience.

The principal colours are red, orange, yellow, green, blue, indigo, and violet. *White* is not properly a colour; as a white body reflects the rays of light without separating them. *Black* bodies, on the contrary, absorb all the rays, or nearly all, and therefore *black* is no distinct colour. But in common discourse, *white* and *black* are denominated colours; and all the colours admit of many shades of difference.—2. Cuvier and other modern naturalists restrict the term *coluber* to those serpents which have transverse plates on the belly, and the plates under the tail forming a double row, a flattened head with nine larger plates, teeth almost equal, and no poison-fangs. The harmless common snake or ringed snake will serve as an example of the form.

The primary sense is a shoot, or that which is set.] A long solid body called a *shaft*, set vertically on a stylobate, or on a corgeries of mouldings which forms its *base*, and surmounted by a spreading mass which forms its *capital*. In strictness, the term *column* should be applied only when the shaft is in one piece; when it is built up of several pieces it is a *pillar* or *pile*. But the two things are unfortunately confounded; and a column consisting of a single piece of timber or stone, is absurdly called a *pillar* or *pile*. Columns are distinguished by the styles of architecture to which they belong; thus, there are Hindoo, Egyptian, Grecian, Roman and Gothic columns. In classic

# COLUMN

architecture, they are further distinguished by the name of the order to which they belong, as Doric, Ionic, or Corinthian columns, and again by some peculiarity of position, of construction, of form, or of ornament, as attached, twisted, cubed, or rudented, and carolytic columns. Columns are

Tuscan Column.

A duel; a fighting between two men; formerly, a formal trial of a doubtful cause, or decision of a controversy between two persons by swords or batons. Single combat was anciently admitted as a legal mode of proof, both in criminal and civil actions, and this kind of evidence appears to have been received in Scotland, as far down as the reign of Robert III., in questions regarding capital crimes.

COMBATANT, *a.*

Contending; disposed to contend. In *her.*, a term for two beasts, as lions, &c., borne in a coat of arms in a fighting position, with their faces to each other.

When very weak, there is a timidity and general want of energy in the character. Its organ is situated at the inferior and posterior angle of the parietal bone, on each side of *Philoprogenitiveness*.

COMBED, *pp.* Separated, cleaned, or dressed with a comb.

## COMBINE

by joint operation; in a good sense, when the object is laudable; in an ill sense, when it is illegal or iniquitous. It is sometimes equivalent to league, or to conspiracy. We say, a *combination* of men to overthrow government, or a *combination* to resist oppression. The term is usually applied to workmen who combine to raise their wages by a sudden refusal to work, except on certain stipulated conditions, which is only unlawful where means of intimidation and threats are used, or where contracts of a definite and precise nature are sought to be avoided.—2. An assemblage; union of particulars; as, a *combination* of circumstances.—3. Commixture; union of bodies or qualities in a mass or compound; as, to make new compounds by new *combinations*.—4. Some substances appear to unite in all proportions, as water and sulphuric acid, and alcohol, and ether. Others unite indefinitely up to a certain point, as water and salt till the solution is saturated. In general, however, bodies unite in certain definite proportions, and the relative quantities in which bodies unite may be expressed by proportional numbers. [See EQUIVALENT.]

Mix dry acid of tartar with dry carbonate of potash, no *combination* will ensue, till water is added.

Henry

5. In *math.*, the union of numbers or quantities in every possible manner; or the variation or alteration of any number of quantities, letters, sounds, or the like, in all the different manners possible. The number of possible changes or *combinations* is found by multiplying the terms 1, 2, 3, 4, 5, continually into each other. Thus  $1 \times 2 = 2$ ;  $2 \times 3 = 6$ ;  $6 \times 4 = 24$ ;  $24 \times 5 = 120$ , &c. So the permutations of five quantities amount to 120. The changes that may be rung on twelve bells amount to 479,001,600. And the twenty-four letters of the alphabet admit of 62,044,810,173,323,943,936,000 changes or combinations.

COMBINE, *v. t.* [Fr. *combiner*; from the Low Latin *combino*, of *com* and *binus*, two and two, or double.] 1. To unite or join two or more things; to link closely together.

Some of them are astringent and used for tanning, and the kernels of others are eatable. They are chiefly valued for their brightly coloured showy flowers, especially in the genus *Combretum*. The Myrobalan nuts, which are used as tonics, are furnished by *Terminalia bellerica*, one of the plants of the order.

COMBUST, *a.* [Lat. *combustus*, *comburo*.] When a planet is in conjunction with the sun or apparently very near it, it is said to be *combust*, or in combustion. The distance within which this epithet is applicable to a planet, is said by some writers to be eight and a half degrees; others say, within the distance of half the sun's disk.

COMBUSTIBLE, *a.* [Fr. *combustible*; Sp. *id.*; from Lat. *comburo*, *combustum*.] That will take fire and burn; capable of catching fire; thus, wood and coal are *combustible* bodies.

COMBUSTIBLE, *n.* A substance that will take fire and burn; a body which, in its rapid union with others, disengages heat and light.

COMBUSTIBLENESS, *n.* The *combustibility*, } lity of taking fire and burning; the quality of a substance which admits the action of fire upon it; capacity of being burnt.—2. The quality of throwing out heat and light, in the rapid combination of its substance with another body.

COMBUSTION, *n.* (*combustus* *chun*.) [Low Lat. *combustio*. See COMBUST.]

1. The operation of fire on inflammable substances; or, according to modern chemistry, the union of an inflammable substance with oxygen, attended with light, and in most instances with heat. In the combustion of a substance, heat or caloric is disengaged, and oxygen is absorbed. This theory of Lavoisier being found somewhat defective, the following definition is given. Combustion is the disengagement of heat and light which accompanies chemical combination.

Combustion cannot be regarded as dependent on any peculiar principle or form of matter, but must be considered as a general result of intense chemical action. *Brande*.

2. In *popular lan.*, a burning; the process or action of fire in consuming a body, attended with heat, or heat and flame; as, the *combustion* of wood or coal.—3. Conflagration; a great fire. Hence, from the violent agitation of fire or flame, 4. Tumult; violent agitation with hurry and noise; confusion; uproar.—*Spontaneous combustion*. Every case in which combustion ensues from the chemical action of bodies on each other, without the

## COME

direct application of fire, may be called an instance of spontaneous combustion; but the term is generally applied to the destruction of the human body by a process altogether peculiar in its phenomena and products, and which has been supposed, though in all probability erroneously, to arise without any extraneous cause of ignition. The reality of some process of igneous decomposition commencing during life, under circumstances quite different from those of ordinary combustion from the application of fire, has been proved beyond a doubt by a number of instances. The individuals consumed in this manner were habitually addicted to the use of alcoholic liquors; they have been generally advanced in years, and most frequently females; some burning substance has been found to come in contact with the body, or to have been in the apartment at the time; or there has been some reason to attribute the origin of the combustion to an electrical cause. The extremities have generally escaped the combustion, and the clothes have been little injured, and it has been observed that in some instances the effusion of water only increased the flame. The product of the combustion is found to consist of greasy and very fetid ashes, the quantity of which is small compared with that of the animal matter decomposed. Spontaneous combustion has been more properly named by Dr. Good, *Catacrasis ebrina*.

COMBUSTIVE, *a.* Disposed to take fire.

COME, *v. i.* pret. *came*, part. *come*. [Sax. *cuman* or *cwiman*; Ger. *kommen*. Qu. W. *cam*, Ir. *ceim*, a step. And qu. the Ar. *kama*; Heb. Ch. *qum*, to rise or stand erect; to set or establish; to subsist, consist, remain; to rectify or set in order; and in Arabic, to be thick, stiff, or congealed. The senses of the words appear to be very different; but we use *come* in the sense of rising or springing, applied to corn; the corn *comes* or *comes up*, Ger. *keimen*. So the butter *comes*, when it separates from the whey and becomes thick or stiff. And is not our common use of *come*, when we invite another to begin some act, or to move, equivalent to *rise*, being originally directed to persons sitting or reclining in the Oriental manner? *Coming* implies moving, driving, shooting along, and so we use *set*; we say, to *set forward*; the tide *sets* northerly.] 1. To move towards; to advance nearer, in any manner, and from any distance. We say, the men *come* this way, whether riding or on foot; the wind *comes* from the west; the ship *comes* with a fine breeze; light *comes* from the sun. It is applicable perhaps to every thing susceptible of motion, and is opposed to *go*.—2. To draw nigh; to approach; to arrive; to be present; as, the time has *come*.

*Come* thou and all thy house into the ark; Gen. vii.

All my time will I wait, till my change *come*; Job xiv.

When shall I *come* and appear before God? Ps. xlii.

Then shall the end *come*; Matt. xxiv.

Thy kingdom *come*; thy will be done; Matt. vi.

3. To advance and arrive at some state or condition; as, the ships *came* to

action; the players *came* to blows; is it *come* to this?

His sons *come* to honour and he knoweth it not; Job xiv.

I wonder how he *came* to know what had been done; how did he *come* by his knowledge? the heir *comes* into possession of his estate; the man will come in time to abhor the vices of his youth, or he will *come* to be poor and despicable, or to poverty. In these and similar phrases, we observe the process or advance is applied to the body or to the mind, indifferently; and to persons or events.—4. To happen or fall out; as, how *comes* that? let *come* what will. Hence, when followed by an object or person, with *to* or *on*, to befall; to light on.

After all that has *come* on us for our evil deeds; Eccl. ix.

All things *come* alike to all; Eccl. ix.

5. To advance or move into view; to appear; as, blood or colour *comes* and goes in the face.—6. To sprout, as plants; to spring. The corn *comes* or *comes up*. "In the *coming* or sprouting of malt, as it must not *come* too little, so it must not *come* too much." So Bacon uses the word; and this use of it coincides nearly with the sense of *quom*, 2 Kings xix. 26, and in the same chapter inserted in Isa. xxxvii. 27. It is the Ger. *keimen*, Icelandic *keima*, to bud or germinate.—7. To become.

So *came* I a widow. Shak.

8. To appear or be formed, as butter; to advance or change from cream to butter; a common use of the word; as, the butter *comes*.—9. *Come*, in the imperative, is used to excite attention, or to invite to motion or joint action; *come*, let us go.

This is the heir; *come* let us kill him; Matt. xxi.

When repeated, it sometimes expresses haste; *come, come*. Sometimes it expresses or introduces rebuke. As the sense of *come* is to move, in almost any manner, in its various applications, that sense is modified indefinitely by other words used in connection with it. Thus with words expressing *approach*, it denotes *advancing nearer*; with words expressing departure, as *from*, *off*, *out of*, &c., it denotes *motion from*, &c.—*To come about*, to happen; to fall out; to come to pass; to arrive. How did these things *come about*? It *came about*, I know not well how, that Cræsus died poor.—*To come about*, to turn; to change; to come round. The wind will *come about* from west to east. The ship *comes about*. It is applied to a change of sentiments.

gain, acquire; that is, to *come near at*, or *close*.

Examine how you *came by* all your state. Dryden.

This is not an irregular or improper use of this word. It is precisely equivalent to *possess*, to *sit by*. [See *Possess*.] So in Ger. *bekommen*, D. *be-koomen*, to get or obtain; the *by* or *be* prefixed.—*To come down*, to descend.

The Lord will *come down* on Mount Sinai; Ex. xix.

Also, to come abroad; Jer. iv.—*To come from*, to depart from; to leave. In popular language, this phrase is equivalent to, where is his native place or former place of residence? where did this man, this animal, or this plant originate?—*To come home*, that is, to *come to home*, or the house; to arrive at the dwelling. Hence, to come close; to press closely; to touch the feelings, interest, or reason. [See *HOME*.]—*To come in*, to enter, as into an enclosure. Also, to comply; to yield; as, *come in* and submit. Also, to lie carnally with; Gen. xxviii.—*To come in for*, to arrive in time to take a share. Johnson says this phrase is taken from hunting, where the slow dogs take nothing. Qu. But the sense in which we now use the phrase has no reference to time or slow movement. It is, to unite with others in taking a part.

The rest *came in* for subsidies. Swift.

*To come into*, to join with; to bring help. Also, and more generally, to agree to; to comply with; to unite with others in adopting; as, to *come into* a measure or scheme. *To come near*, to approach in place. Hence metaphorically, to approach in quality; to arrive at nearly the same degree in a quality or accomplishment; to resemble.—*To come nigh*, is popularly used in like senses.—*To come no near*, in *seamanship*, is an order to the helmsman not to steer so close to the wind.—*To come off*, to issue from; to proceed from, as a descendant.

So we say, the young man *comes on* well in his studies, and the phrase often denotes a prosperous advance, successful improvement. Also, to come into use, as a fashion.—To *come up the capstern*, in *seamanship*, is to turn it the contrary way, so as to slacken the rope about it.—To *come up the tackle*, is to slacken it gently.—To *come up to*, to approach near. Also, to amount to. Also, to advance to; to rise to.—To *come up with*, to overtake, in following or pursuit.—To *come upon*, to fall on; to attack or invade.—To *come*, in futurity; to happen hereafter. In times to *come*. Success is yet to *come*.

Take a lease for years to *come*. Locke.

*Come* is an intransitive verb, but the participle *come* is much used with the substantive verb, in the passive form. "The end of all flesh is *come*." I am *come*, thou art *come*, he is *come*, we are *come*, &c. This use of the substantive verb, for *have*, is perhaps too well established to be rejected; but *have* or *has* should be used in such phrases. In the phrase, "*come* Friday, *come* Candlemas," there is an ellipsis

I.

a planet, but accompanied with a train of light, performing revolutions about the sun, in an elliptical orbit, having the sun in one of its foci. In its approach to its perihelion, it becomes visible, and after passing its perihelion, it departs into remote regions and disappears. In popular lan., comets are *tailed*, *bearded*, or *hairy*, but these terms are taken from the appearance

Comet of 1811.

of the light which attends them, which, in different positions with respect to the sun, exhibits the form of a tail or train, a beard, or a border of a hair.

When the comet is westward of the sun, and rises or sets before it, the light appears in the morning like a train, beginning at the body of the comet, and extending westward and diverging in proportion to its extent. Thus the comet of 1769, when it rose in the morning, presented a luminous train that extended nearly from the horizon to the meridian. When the comet and the sun are opposite, the earth being between them, the comet is, to the view, immersed in its train, and the light appears around its body like a fringe or border of hair. From the train of a comet, this body has obtained the popular name of a *blazing star*. Herschel observed several comets, which appeared to have no nucleus, but to be merely collections of vapour condensed about a centre.

The last syllable is clearly from the root of *many*, which seems to belong to the root of *man*, and *mean* is of the same family. Hence we see the connection between *common* and *mean*, as *vulgar*, from *vulgus*, *Eng. folks*.]

1. Belonging equally to more than one, or to many indefinitely; as, life and sense are *common* to man and beast; the *common* privileges of citizens; the *common* wants of men.—2. That body of rules, principles, and customs which have been received from our ancestors, and by which courts have been governed in their judicial decisions. The evidence of this law is to be found in the reports of those decisions, and the records of the courts. Some of these rules may have originated in edicts or statutes which are now lost, or in the terms and conditions of particular grants or charters; but it is most probable that many of them originated in judicial decisions founded on natural justice and equity, or on local customs.—(*Common pleas*, in *Great Britain*, one of the king's (queen's) courts, now held in Westminster Hall. It consists of a chief justice and three other justices, and has cognizance of all civil causes, real, personal, or mixed, as well by original writ, as by removal from the inferior courts. A writ of error, in the nature of an appeal, lies from this court to the court of king's (queen's) bench. In some of the American states, a *court of common pleas* is an inferior court, whose jurisdiction is limited to a county, and it is sometimes called a county court. This court is variously constituted in different states, and its powers are defined by statutes. It has jurisdiction of civil causes, and of minor offences; but its final jurisdiction is very limited; all causes of magnitude being removable to a higher court by appeal or by writ of error.—*Common Prayer*, the liturgy of the Church of England, which all the clergy of the church are enjoined to use, under a penalty.—*Common recovery*, a legal process for recovering an estate or barring entails.—*Common centering*, in *arch.*, centering without a truss, but with merely a tie beam.—*Common pasture*, a known rural servitude in *Scots law*, by which the owner of the dominant tenement is entitled to pasture a certain number of cattle on the grass grounds of the servant

tenement. It is established either by grant or by prescription.—*Common agent*, an agent or solicitor before the Court of Session, employed to conduct a cause in which several parties have a common interest.—*Common debtor*. In *Scots law*, where the effects of a debtor have been arrested, and there are several creditors claiming a share of them, the debtor, as being debtor to all the claimants, is distinguished by the name of the *common debtor* in the proceedings which take place in the competition.—*Common property*, property either heritable or movable, belonging to more than one proprietor *pro indiviso*.—*Common good*, in *Scots law*, a term which, in its widest acceptation, includes all the property of a corporation, over which the magistrates have a power of administration solely for behoof of the corporation.—*Common interest*, as contradistinguished from common property, is applied to that right arising from mutual interest in a subject, which, although not amounting to common property, vests the parties interested with certain rights which they may legally vindicate. For example, in a building consisting of several stories or floors, each of which is the separate property of an individual proprietor, all the proprietors have a *common interest* in the preservation of the walls and roof.—*Common time*, in music, duple or double time, when the semibreve is equal to two minims.—*In common*, equally with another, or with others; to be equally used or participated by two or more; as, tenants *in common*; to provide for children *in common*; to assign lands to two persons *in common*, or to twenty *in common*; we enjoy the bounties of Providence *in common*.

This is a matter of most universal right.—*Common appurtenant* may be annexed to lands in other lordships, or extend to other beasts, besides those which are generally commonable; this is not of common right, but can be claimed only by immemorial usage and prescription.—*Common because of vicinage*, or neighbourhood, is where the inhabitants of two townships, lying contiguous to each other, have usually intercommoned with one another, the beasts of the one straying into the other's fields; this is a permissive right.—*Common in gross*, or at large, is annexed to a man's person, being granted to him and his heirs by

deed; or it may be claimed by prescriptive right, as by a parson of a church or other corporation sole.

**COMMON-COUNCIL**, *n.* The council of a city or corporate town, empowered to make by-laws for the government of the citizens. In most of the American cities, the mayor, aldermen, and common-councilmen constitute one body, called a *court of common-council*. The common-councils sometimes consist of two houses, chambers, or courts (as at Norwich), and sometimes form only one. The city of London is divided into twenty-four wards; the supreme magistrato of each ward has the title of alderman; the twenty-four aldermen, with the lord mayor, form the *court of aldermen*; each ward annually chooses a certain number of the inhabitants, who are sworn to assist the aldermen with their advice in all public affairs, and they form the *court of common-council*.

The word denotes a band or number of men under one flag or standard. What decides this question is, the Spanish mode of writing the word with a tilde, titled *ñ*, *compañía*, for this is the manner of writing *pañó*, cloth; whereas *panis*, bread, is written *pan*. The orthography of the word in the other languages is confirmatory of this opinion.] 1. In *milit. affairs*, the soldiers united under the command of a captain; a subdivision of a regiment, consisting usually of a number from 60 to 100 men. But the number is indefinite.—2. Any assemblage of persons; a collection of men, or other animals, in a very indefinite sense. **COMPARABLE**, *a.* [Lat. *comparabilis*. See **COMPARE**.] That may be compared; worthy of comparison; being of equal regard; that may be estimated as equal.

**COMPARATIVE**, *a.* [Lat. *comparativus*; It. *comparativo*; Fr. *comparatif*. See **COMPARE**.] 1. Estimated by comparison; not positive or absolute. The comparative weight of a body, is that which is estimated by comparing it with the weight of another body. A body may be called heavy, when compared with a feather, which would be called light, when compared with iron. So of comparative good or evil.—2. Having the power of comparing different things; as, a comparative faculty. Qu.—3. In *gram.*, expressing more or less. The comparative degree of an adjective expresses a greater or less degree of a quantity, or quality, than the positive; as, *brighter*, or *more bright*; *smaller*; *finer*; *stronger*; *weaker*.

—*Comparative anatomy*, that branch of anatomy which treats of the anatomy of other animals than man, with a view to compare their structure with that of human beings, and thus to illustrate the animal functions, and particularly with reference to a more perfect knowledge of the functions of several parts of the human body. Comparative anatomy is the only true basis of physiology.

**COMPARATIVE**,† *n.* One who is equal or pretends to be an equal.

**COMPARATIVELY**, *adv.* In a state of comparison; by comparison; according to estimate made by comparison; not positively, absolutely or in itself. How few, *comparatively*, are the instances of a wise application of time and talents! Anon.

**COMPARE**, *v. t.* [Lat. *comparo*, to prepare, to provide or procure, to make equal, to compare; *con* and *paro*, to prepare; It. *parare*, to dress, trim, adorn; also, to *parry*; Sp. *parar*, to prepare, to halt, to stop, to prevent, to detain, to stake at cards; Port. *parar*, to stop or cease to go forward; to meet or confine upon; to touch or be bounded; to tend; to drive at some end; to aim at; to come to; to hinder; to *parry*, or ward off; to turn or change in inclination or morals; to lay or stake

## COMPARED

as a wager; Sp. *parada*, a halt, stop, pause; a fold for cattle; a relay of horses or mules; a dam or bank; a bet, stake, or wager; a *parade*, or place of exercise for troops; W. *parodi*, to prepare. This seems to be the *παράδοσις*, of the Shemitic languages. The primary sense is, to throw, drive, or strike; hence, to drive or force off, to separate, to *pare*; hence, to trim, or dress, which may be from separating, as in the French *parer des cuirs*, to dress or curry leather; or from setting off, as we express the idea, that is, by enlargement, or display; or from setting in order, as we say, to fix. The sense of *compare* is allied to the Portuguese application of the word, to come to, to meet; and the Lat. *par*, equal, belongs to the same root, and seems to be included in *comparo*. One of the principal significations is, to stop; that is, to set; to fix. In fencing, it is to intercept by thrusting the weapon aside. In gaming, it is to lay or throw down. All the senses unite in that of extending, thrusting, or driving. W. *par*, that is, contiguous, *preparedness*, a pair, a fellow, Eng. *peer*, Lat. *par*. The latter word seems to signify, extended, or reaching to, and to be closely allied to the Portuguese sense of contiguity.] 1. To set or bring things together in fact or in contemplation, and to examine the relations they bear to each other, with a view to ascertain their agreement or disagreement; as, to compare two pieces of cloth, two tables, or coins; to compare reasons and arguments; to compare pleasure with pain. In comparing movable things, it is customary to bring them together, for examination. In comparing things immovable or remote, and abstract ideas, we bring them together in the mind, as far as we are able, and consider them in connection. Comparison therefore is really collation, or it includes it.—2. To liken; to represent as similar, for the purpose of illustration.

Solon compared the people to the sea, and orators and counsellors to the winds; for that the sea would be calm and quiet, if the winds did not trouble it. Bacon.

In this sense *compare* is followed by *to*.—3. To examine the relations of things to each other, with a view to discover their relative proportions, quantities, or qualities; as, to compare two kingdoms, or two mountains with each other; to compare the number ten with fifteen; to compare ice with crystal; to compare a clown with a dancing master or a dandy. In this sense *compare* is followed by *with*.—4. In *gram.*, to form an adjective in the degrees of comparison; as, *blackish*, *black*, *blacker*, *blackest*.—6.† To get; to procure; to obtain; as in Latin.

**COMPARE**, *v. i.* To hold comparison; to be like or equal.—2.† To vie.

## COMPARTMENT

**COMPARE**, *v.* One who compares or makes a comparison.

**COMPARING**, *n.* Act of comparing. **COMPARISON**, *n.* [It. *comparazione*; Fr. *comparaison*; Lat. *comparatio*. See **COMPARE**.] 1. We learn to form a correct estimate of men and their actions by comparison. *Anon.* 2. The state of being compared.

If we rightly estimate what we call good and evil, we shall find it lies much in comparison. *Locke.*

3. Comparative estimate; proportion. Who is left among you that saw this house in its first glory? And how do you see it now? Is it not in your eyes in comparison of it as nothing? *IIag. ii.*

4. In *gram.*, the formation of an adjective in its several degrees of signification; as, *strong, stronger, strongest; greenish, green, greener, greenest; glorious, more glorious, most glorious.* In *English*, there are strictly four degrees of comparison.—5. A simile; similitude, or illustration by similitude.

Wherefo shall we liken the kingdom of God? Or with what comparison shall we compare it? *Mark iv.*

6. In *rhet.*, a figure by which two things are considered with regard to a third, which is common to them both; as, a hero is like a lion in courage. Here courage is common to hero and lion, and constitutes the point of resemblance.

The distinction between *similitude* and *comparison* is, that the former has reference to the quality; the latter, to the quantity. Comparison is between more and less; similitude is between good and bad. Hannibal—hung like a tempest on the declivities of the Alps—is a likeness by similitude. The sublimity of the scriptural propheta exceeds that of Homer, as much as thunder is louder than a whisper—is a likeness by comparison. *J. Q. Adams, Loc. ix.*

But comparison has reference to quality as well as quantity. Comparison, among *phrenologists*, is one of the reflecting faculties; its function is to give the power of perceiving resemblances and analogies; to produce a tendency, to compare one thing with another, and to suggest resemblances between objects or ideas. Its organ is situated at the middle of the forehead, above *Eventuality*.

## COMPASS

as of a picture, or of a ground-plot.—2. A design composed of several different figures, disposed with symmetry, for ornament; as, a *compartment* of tiles or bricks, duly arranged, of various colours and varnished, to decorate a building. In *gardening*, *compartments* are assemblages of beds, plots, borders, walks, &c. In *her.*, a *compartment* is called also a partition.

**COMPARTNER**, *n.* A sharer. **COMPASS**, *n.* [Fr. *compas*; con or com and Fr. *pas*, Sp. *paso*, It. *passo*, a pace or step, Lat. *passus*, which coincides with the participle of *pando*, to open or stretch. [See **PACE** and **PASS**.] A compass is a stepping together. So in Spanish and Portuguese, it signifies a beating of time in music.] 1. Stretch; reach; extent; the limit or boundary of a space, and the space included; applied to time, space, sound, &c. Our knowledge lies within a very narrow compass. The universe extends beyond the compass of our thoughts. So we say, the compass of a year, the compass of an empire, the compass of reason, the compass of the voice.

And in that compass all the world contains. *Dryden.*

2. A passing round; a circular course; a circuit.

5. "The mariner's compass, called *compas de mer*, or *boussole*, by the French, is an instrument used to point out the way or course of a ship or other vessel at sea. It consists of three parts; namely, the box, the card or fly, and the needle. The box, which contains the card and needle, is a circular brass receptacle, hung within a wooden one, by two concentric rings called gimbals,

the whole circumference into equal parts or degrees, 360 of which complete the circle; and consequently, the distance or angle comprehended between any two rhumbs, is equal to eleven and a quarter degrees. The four principal are called cardinal points; viz. North, South, East, and West. The names of the rest are compounded of these. The needle is a small bar of steel made magnetical, which has the property of pointing one of its ends towards the north pole of the world. Let *DEA* be a circle, of which the diameter is *EA*, and centre *C*; and let *ACB* be an angle at the centre, measured by the arc *AB*; also, from *C*, let *CD* be drawn at right angles to *AC*; then the complement of the angle *ACB*, or of the arc *AB*, is the angle *BCD*, or the arc *BD*. In like manner, the complement of the obtuse angle *ECB*, or of the arc *EAB*, is the angle *DCB*, or the arc *DB*, which is its excess above a right angle or a quadrant. Hence, to find the complement of any given angle expressed in degrees, minutes, and seconds, subtract it from 90° if acute, but if obtuse subtract 90° from it.—*Complements of the parallelograms about the diagonal of a parallelogram.* If, through a point in the diagonal, two lines be drawn parallel to the sides, the whole parallelogram is then divided into two parallelograms on the diagonal, and two which only touch the diagonal at one angle. ## COMPREHEND

umbels at the top. A *compound fructification* consists of several confluent florets: opposed to *simple*.—4. *Compound interest*, is interest upon interest; when the interest of a sum is added to the principal, and then bears interest; or when the interest of a sum is put upon interest.—5. *Compound motion*, is that which is effected by two or more conspiring powers, acting in different but not in opposite directions.—6. *Compound number*, is that which may be divided by some other number besides unity, without a remainder; as 18, which may be divided by 2, 6 and 9.—7. *Compound ratio*, is that which the product of the antecedents of two or more ratios has to the product of their consequents. Thus 6 to 72 is in a ratio compounded of 2 to 6, and of 3 to 12, because  $\frac{6}{72} = \frac{2}{6} \times \frac{3}{12}$ . In like manner the ratio of  $ab$  to  $cd$ , is in a ratio compounded of  $a$  to  $c$ , and of  $b$  to  $d$ ; for  $\frac{ab}{cd} = \frac{a}{c} \times \frac{b}{d}$ . Hence, it follows, that in any continued proportion, the ratio of the first term to the last is compounded of all the intermediate ratios. [See *Ratio*.]—8. *Compound qualities*, in *alge*, are such as are joined by the signs + and -, plus and minus, and expressed by more letters than one, or by the same letters unequally repeated. Thus  $a+b-c$ , and  $bb-b$ , are compound quantities.—9. *Compound larceny*, is that which is accompanied with the aggravation of taking goods from one's house or person.—10. *Compound time*, in *music*, is when two or more measures are joined in one, as  $\frac{3}{4}$  and  $\frac{3}{4}$ .—*Compound archway*, in *medieval arch*, a series of arches of different sizes, enclosed in one of larger dimensions.

**COMPRESSIBILITY**, *n.* The quality of being compressible, or yielding to pressure; the quality of being capable of compression into a smaller space or compass; as, the *compressibility* of elastic fluids, or of any soft substance.

The compressibility of bodies arises from their porosity, and hence, when a body is compressed into a smaller bulk the size of its pores is diminished, or its constituent particles are brought into closer contact, while its quantity of matter remains the same. All bodies are probably compressible in a greater or less degree. Those bodies which return to their former shape and dimensions, when the compressing force is removed, are termed elastic.

**COMPRESSIBLE**, *a.* Capable of being forced or driven into a narrower compass; yielding to pressure; giving way to a force applied; as, elastic fluids are *compressible*; water is *compressible* in a small degree.

**COMPRESSING**, *ppr.* Pressed together.

**COMPRESSION**, *n.* The act of compressing, or of pressing into a narrower compass; the act of forcing the parts of a body into closer union, or density, by the application of force. Some writers make the following distinction between *compression* and *condensation*; *compression* is the action of any force on a body, without regarding its effects; whereas *condensation* denotes the state of a body that is actually reduced into a less bulk, and is an effect of *compression*, though it may be brought about by other means. This distinction, however, is seldom attended to.

**CON**, [*with* or *against*.] A Latin inseparable preposition or prefix to other words. Ainsworth remarks that *con* and *cum* have the same signification, but that *cum* is used separately, and *con* in composition. *Con* and *cum* may be radically distinct words. The Irish

# CONCAMERATE

*conh*, or *coinh*, is equivalent to the Latin *con*; and the Welsh *cym*, convertible into *cyn*, appears to be the same word, denoting, says Owen, a mutual act, quality, or effect. It is precisely equivalent to the Latin *com*, in *compara*, *compono*, and the Latin *com*, in composition, may be the Celtic *conh* or *cym*. But generally it seems to be *con*, changed into *com*. Ainsworth deduces *cum* from the Greek *κύν*: for originally it was written *cyn*. But this is probably a mistake. *Con* coincides in radical letters and in signification with the Tonic *gain*, *gen*, *yeun*, *igen*, *igien*, in the English *again*, *against*; Sax. *yeun*, *on-yeun*; Sw. *igen*; Dan. *igien*. Whatever may be its origin or affinities, the primary sense of the word is probably from some root that signifies to meet or oppose, or turn and meet; to approach to, or to be with. This is the radical sense of most prepositions of the like import. See the English with, *again*. So in Irish, *coinne*, a meeting; *os coinne*, opposite. *Con*, in compounds, is changed into *l* before *r*, as in *colligo*, to collect, and into *m* before a labial, as in *compara*, to compare. Before a vowel or *h*, the *n* is dropped; as in *coalesco*, to coalesce, to co-operate; *cohibeo*, to restrain. It denotes union, as in *conjoin*; or opposition, as in *conflict*, *contend*. Qu. W. *gan*, with.

**CON**, [abbreviated from Latin *contra*, against.] In the phrase, *pro and con*, for and against, *con* denotes the negative side of a question. As a noun, a person who is in the negative; as, the *pro* and *cons*.

**CON**, *v. t.* [Sax. *cennan*, *connan*, *cunnan*, to know, to be able, to be skillful or wise; and *cennan*, to hear or bring forth, Gr. *γινωσκω*; and *cunnan*, to try, to attempt, to prove, Lat. *conor*; whence *cunning*, skillful, experienced, or skill, experience; the latter word, *cunnan*, coincides in sense with Sax. *anginnan*, *anginnan*, to begin, to try, to attempt, Lat. *conor*. D. *kennen*, to know, understand, or be acquainted; *kennen*, to be able, *can*, to know or understand, to hold or contain; the last signification coinciding with the W. *gann*, to contain. Ger. *kennen*, to know; and *können*, to be able. Dan. *kun*, to be able, pret. *kunde*, whence *hundshab*, knowledge, skill, experience. Sw. *känna*, to know; *kuna*, to be able, to be skilled, to know. The primary sense is, to strain or stretch, which gives the sense of strength, power, as in *can*, and of holding, containing, comprehending, as *contain*, from *continere*, *tenere*, Gr. *τενέω*, Lat. *tendo*. And this signification connects these words with *gin*, in its compounds, *begin*, Sax. *beginnan*, *anginnan*, &c., to strain, to try, to stretch forward and make an effort; also with the Gr. *γίγνομαι*, Lat. *gignere*, to beget, or to bring forth. In the sense of know, *con* signifies to hold or to reach.] 1. To know. "I *conne* no skill." "I shall not *conne* answer." I shall not know or be able to answer.—2. *casser*, Eng. to quash, Lat. *cardo*, *cardo*.]

1. The act of shaking, particularly and  
properly, by the stroke or impulse of  
another body; also the shock occasioned  
by two bodies coming suddenly into col-

particles of air and the glass, occasioned  
by the rapid explosion of the pow-  
der.

It is believed that great ringing of bells,  
in populous cities, hath dissipated pestilent  
air, which may be from the concussion of  
the air. *Bacon.*

2. The state of being shaken; a shock;  
as, the *concussion* of the brain by a  
stroke. It is used also for shaking or

are mostly unattended by any fractures,  
and are often followed by almost im-  
mediate death.

1. To pronounce to be utterly wrong;

making more dense or compact; or the  
act of causing the parts that compose  
a body to approach or unite more  
closely, either by mechanical pressure,  
or by a natural process; the state of  
being condensed. Dew and clouds are  
supposed to be formed by the *condensa-  
tion* of vapour. It is opposed to  
*rarefaction* and *expansion*. *Condensa-  
tion* is applicable to any compressi-  
ble matter; and from condensation  
proceeds increased hardness, solidity  
and weight. Steam is condensed into  
water by abstracting its heat, by which  
it is reduced in volume about two

thousand times. By similar means  
gases are converted into fluids, and the  
latter into solids.

**CONDENSATIVE**, *a.* Having a power  
or tendency to condense.

**CONDENSE**, *v. t.* (condens') [Lat.  
*condenso*; *con* and *denso*, to make thick

more close, thick, or compact; to cause  
the particles of a body to approach, or  
to unite more closely, either by their  
own attraction or affinity, or by me-  
chanical force. Thus, vapour is said  
to be *condensed* into water by the ap-  
plication of cold; and air is *condensed*  
in a tube by pressure. Hence the  
word is sometimes equivalent to *com-  
press*.—2. To make thick; to inspiss-  
ate; applied to soft compressible sub-  
stances.—3. To compress into a smaller  
compass, or into a close body; to  
crowd; applied to separate individuals.  
Thus we say, to *condense* ideas into a  
smaller compass.

**CONDENSE**, *v. i.* (condens') To be-  
come close or more compact, as the  
particles of a body; to approach or  
unite more closely; to grow thick.

particles. *Newton.*

more close in parts; made or become  
compact; compressed into a narrower  
compass.

**CONDENSER**, *n.* A pneumatic engine  
or syringe in which air may be com-  
pressed. It consists of a cylinder, in  
which is a movable piston to force the  
air into a receiver, and a valve to pre-  
vent the air from escaping; also a ves-  
sel in which aqueous or spirituous va-  
pours are reduced to a liquid form,  
either by injection of a quantity of  
cold water, as in the condenser of a  
steam-engine; or when this is inadmis-  
sible, as in the case of alcoholic va-  
pour, by placing the condenser in an-  
other vessel through which is main-  
tained a constant current of water, the  
condenser being so constructed as to  
expose the steam or vapour in thin  
strata over an extended surface, to the  
action of the cooling medium.

**CONDENSING**, *ppr.* Making more  
close or compact.

**CONDENSITY**, *n.* The state of being

State; a particular mode of being; *applied to external circumstances, to the body, to the mind, and to things*. We speak of a good *condition* or a bad *condition*, in reference to wealth and poverty; in reference to health and sickness; in reference to a cheerful or depressed disposition of mind; and with reference to a sound or broken, perishing state of things. The word signifies a setting or fixing, and has a very general indefinite application, coinciding nearly with *state*, from *sto*, to stand, and denotes that particular frame, form, mode, or disposition, in which a thing exists, at any given time. A man is in a good *condition*, when he is thriving. A nation, with an exhausted treasury, and burdened with taxes, is not in a *condition* to make war. A poor man is in a humble *condition*. Religion affords consolation to man in every *condition* of life. Exhortations should be adapted to the *condition* of the mind.

Terms given, or provided, as the ground of something else; that which is established, or to be done, or to happen, as requisite to another act; as, I will pay a sum of money, on *condition* you will engage to refund it.

Hence it is a fee restrained to particular heirs, to the exclusion of others.—

*Conditional obligation*, in civil law, an obligation depending on the existence of a condition. Conditions annexed to obligations are divided into *possible* and *impossible*; the former are such as may naturally or legally happen; the latter such as are contrary to the law or to good morals. *Possible* conditions are distinguished into *potential* or *potestative*, *i. e.* such as are within the power of the party burdened with them; and *casual*, being such as depend upon a certain event over which the party has no control.—2. The condor, which is peculiar to South America, resembles, in its most essential characters, the vultures of the old continent, differing from them chiefly in the large cartilaginous caruncle which surmounts

Condor (*Vultur gryphus*).

its beak, and in the large size of its oval and longitudinal nostrils, placed almost at the very extremity of the cere. In size, it is little, if at all superior to the bearded griffin, the lämmereger of the Alps. The greatest authentic measurement scarcely carries the extent of its wings beyond fourteen feet, and it seems rarely to attain that size. Humboldt met with none that exceeded nine feet. These birds are found most frequently in elevated situations. They are never seen in large companies, but in groups of three or four; and only descend to the plains when impelled by hunger. Then two of them will attack the vicuña, the guanaco, the heifer, and even the puma, the lion of South America, persecuting the tormented quadruped, till overpowered, it falls beneath the wounds inflicted by their claws and beaks.

Young men, in the *conduct* and *manage* of actions, embrace more than they can hold. *Bacon*.
